Foreword

The 2021 Population Census (21C) was conducted by the Census and Statistics Department from June to August 2021. The Census provides up-to-date benchmark information on the demographic and socio-economic characteristics of the population of Hong Kong and on its geographical distribution. Such information is essential to the Government for planning and policy formulation, and to the private sector and academia for business and research purposes.

This report provides an overview on how the 21C was conducted, with detailed descriptions on various aspects from planning to data collection, processing and dissemination. It discusses the strategies and measures adopted to ensure the successful enumeration of the 21C during the COVID-19 pandemic. The information given in this report supplements the other reports that contain findings of the 21C, enabling users to better understand the data collected in the 21C.

Results of the 21C are available in a number of publications and other statistical products. The *2021 Population Census Main Results*, which analyses in detail the various characteristics of the Hong Kong population, is released at the same time when this report is published. All the released publications and other statistical products, including the Interactive Data Dissemination Service, Main Tables, District Profiles, interactive dashboards and short videos, are available for download/ use on the thematic website of the 21C.

1. 緒言

背景

1.1 根據慣例，自 1961 年起，香港每 10 年進行一次人口普查，並在兩次人口普查中間，進行一次中期人口統計。香港於 2021 年 6 月至 8 月期間進行了 2021 年人口普查。

1.2 香港在 1961 年、1971 年、1981 年、1991 年、2001 年、2011 年及 2021 年進行了人口普查。1961 年和 1971 年的人口普查，對全部人口進行點算，並搜集他們的社會經濟特徵的資料。至於 1981 年、1991 年、2001 年、2011 年及 2021 年的人口普查，則就整體人口而言，只進行人口點算和搜集人口的年齡和性別資料，而人口的社會經濟特徵的詳細資料，則透過一個大規模的抽樣調查搜集。這個設計是一個較具成本效益的方法。

1.3 為提供更多最新的人口資料，在兩次人口普查中間會進行一次中期人口統計，故香港在 1966 年、1976 年、1986 年、1996 年、2006 年及 2016 年進行了中期人口統計。與人口普查稍有不同，中期人口統計並不進行全面人口點算，只是透過大規模抽樣調查，搜集人口特徵的詳細資料。至於人口總數和特徵，則根據適當的統計理論，從抽樣調查結果推算而來。

1. Introduction

Background

1.1 It is an established practice from 1961 for Hong Kong to conduct a population census once every 10 years and a by-census in the middle of the intercensal period. The 2021 Population Census was conducted in June to August 2021.

1.2 Population censuses were conducted in 1961, 1971, 1981, 1991, 2001, 2011 and 2021. For both the 1961 and 1971 Population Censuses, the entire population was counted and enquired of their socio-economic characteristics. In the 1981, 1991, 2001, 2011 and 2021 Population Censuses, while a complete headcount of all persons and their age and sex information was enumerated, the detailed socio-economic characteristics of the population were enquired on the basis of a large sample. This design represents a more cost-effective approach.

1.3 In order that more up-to-date information on the population could be made available, a population by-census is also conducted in between two population censuses. Thus, in 1966, 1976, 1986, 1996, 2006 and 2016, there were population by-censuses conducted. A population by-census differs from a population census in not having a complete headcount of the population but simply enquiring on the detailed characteristics of the population on the basis of a large sample. The size and characteristics of the entire population are inferred from the sample results in accordance with appropriate statistical theory.

1.4 2021 年人口普查已於 2021 年 6 月 23 日至 8 月 4 日的 43 天期間進行。全港約九成住戶接受簡單的點算，只須提供住戶成員的基本人口特徵資料；其餘約一成住戶接受詳細的訪問，提供住戶成員多方面有關人口及社會經濟特徵的資料。

1.5 2021 年人口普查提供香港的人口和社會經濟特徵，以及按地區分布的最新基準統計數字。這些數字對政府在規劃和制定政策尤為重要。小區人口統計數字是政府制定地區發展和服務計劃的基礎；而詳細人口分組資料例如長者、青年、兒童、單親人士、不同種族的人士等，則有助政府策劃福利政策和社會服務計劃。而最重要的是，人口普查和中期人口統計的結果，是人口統計系統中編製人口估計的基準資料。

1.6 編製人口數字的方法相當繁複，所需的資料來源亦很廣泛。其中，人口普查及中期人口統計系列的統計結果，是整個編製過程的根基。這些基準資料，加上透過其他行政系統（例如出生、死亡及出入境記錄）及抽樣統計調查（特別是持續性的綜合住戶統計調查）所得的資料，連結成一個人口統計數據庫，可用於編製人口數字及其他眾多用途。

2021 年人口普查的時間

1.7 在 1981 年至 2001 年期間進行的人口普查／中期人口統計都在該年的 3 月內進行資料搜集，為期 9 至 13 天。為配合教師及學生參與人口普查／中期人口統計的外勤工作，以及學校提供校舍

1.4 The 2021 Population Census was conducted in the 43-day period from 23 June to 4 August 2021. About nine-tenths of the households were subject to simple enumeration to provide basic demographic information of their household members, while the remaining one-tenth of the households were subject to more detailed enquiry on a broad range of demographic and socio-economic characteristics of their household members.

1.5 The 2021 Population Census provides up-to-date benchmark statistics on the demographic and socio-economic characteristics of the population of Hong Kong and on its geographical distribution. Such statistics are vital to the planning and policy formulation of the Government. Statistics on small areas form the basis of district development and service planning programmes of the Government, while comprehensive information on population sub-groups, such as the older persons, youths, children, single parents and persons of different ethnicities, facilitates the planning of welfare policy and social service programmes. Most important of all, results of the censuses/by-censuses form the benchmark data for the compilation of population estimates in the Population Statistics System.

1.6 The system for compiling population figures is complex and requires data from a wide variety of sources. The results of population censuses/by-censuses form the cornerstone of the system. These benchmark data are taken together with statistical data generated from administrative systems (such as births, deaths and passenger movement records) and sample surveys (in particular the continuous General Household Survey) to form a population statistical database which serves a multitude of purposes, including the compilation of population figures.

Timing of the 2021 Population Census

1.7 In the population censuses/by-censuses conducted during 1981 to 2001, data collection was conducted in a period lasting for 9 to 13 days in March of the respective years. Special school holidays lasting for more than a week were arranged to enable teachers

作為外勤工作站之用，會在有關資料搜集期間安排超過一星期的特別學校假期。

1.8 基於審慎考慮有充足的臨時外勤工作人員供應、避免學校需要安排特別學校假期、天氣情況及工作成本等因素，政府統計處自 2006 年起在暑假期間進行人口普查／中期人口統計。當中特別考慮到由於外勤工作在暑假進行，因此無須安排特別學校假期，也不會影響學校的正常時間表及學校運作。相比以往人口普查／中期人口統計為期 9 至 13 天的資料搜集期，自 2006 年起進行的人口普查／中期人口統計均採用一個較長的資料搜集期，如 2006 年中期人口統計的資料搜集期為期 18 天，而 2011 年人口普查及 2016 年中期人口統計的資料搜集期則延長至 34 天，務求有較多時間到訪住戶，增加成功點算住戶的機會。此外，由於外勤工作期較長，統計員有較長時間完成所有外勤訪問工作，故整體上所需的統計員較少。這亦可減少招聘、培訓及管理臨時外勤工作人員所需的資源。

1.9 由於在 2006 年、2011 年及 2016 年在暑假期間分別成功進行了 2006 年中期人口統計、2011 年人口普查及 2016 年中期人口統計，本處決定在 2021 年 6 月 23 日至 8 月 4 日的 43 天內進行 2021 年人口普查。由 2021 年 6 月 23 日起，住戶可填交網上問卷、致電人口普查服務中心進行電話訪問或寄回已填妥的紙本問卷（接受簡單點算的住戶適用），以提供所需資料。於 2021 年 7 月 18 日至 8 月 4 日期間，統計員會到訪未完成問卷的住戶，協助住戶提供所需數據。因 2021 年人口普查乃於 2019 冠狀病毒病疫情期間進行，本處實施了一系列的措施以確保受訪者和統計員於數據搜集期間的健康和安全。

and students to participate in the population census/by-census fieldwork and school premises to be deployed as field centres.

1.8 With due consideration of such factors as secure supply of temporary field workers, avoidance of the need for special school holidays, weather conditions and project cost, the Census and Statistics Department has conducted population censuses/by-censuses in the summer vacation since 2006. In particular, specially arranged school holidays were not required because fieldwork was conducted in the summer vacation, thereby without causing any disruption to the normal school calendar and school operation. Compared with the data collection period lasting for 9 to 13 days in the previous population censuses/by-censuses, a longer data collection period has been adopted since 2006. For instance, the data collection period of the 2006 Population By-census lasted for 18 days, whereas that of the 2011 Population Census and the 2016 Population By-census was lengthened to 34 days. This allowed more time to visit the households, increasing the chance of successfully enumerating them. Besides, as census officers would have more time to complete all the fieldwork assignments in a longer operation period, fewer census officers were required. Resources required for recruitment, training and management of temporary field workers could also be reduced.

1.9 Given the success in conducting the 2006 Population By-census, the 2011 Population Census and the 2016 Population By-census in the summer vacation of 2006, 2011 and 2016 respectively, the 2021 Population Census was decided to be conducted during the 43 days from 23 June to 4 August 2021. Starting from 23 June 2021, households could provide the required information by completing the online questionnaire (OQ), calling the Census Services Centre (CSC) to conduct a telephone interview (TI) or mailing back the completed paper questionnaire (applicable to households subject to simple enumeration). During the period from 18 July to 4 August 2021, census officers visited households that had not yet completed the questionnaires so as to assist them in providing the requested data. As the 2021 Population Census was conducted amid the COVID-19 pandemic, a number of

measures were implemented to ensure health and safety of respondents and enumerators during the data collection period.

統計範圍

1.10 2021 年人口普查採用「居住人口」方法，以涵蓋所有居港人口。政府統計處自 2000 年 8 月開始採用「居住人口」方法來編製香港的人口估計。作出這個改動的原因，是「居住人口」概念在統計理論而言，較適用於計算一個地方的人口。這個做法尤為配合現今的香港人口居住和流動模式。

1.11 2021 年人口普查的點算時刻（即 2021 年 6 月 30 日凌晨 3 時）的居港人口包括「常住居民」和「流動居民」。「常住居民」指以下兩類人士：（一）在點算時刻之前的 6 個月內，在港逗留最少 3 個月，又或在點算時刻之後的 6 個月內，在港逗留最少 3 個月的香港永久性居民，不論在點算時刻他們是否身在香港；及（二）於點算時刻身在香港的香港非永久性居民。

1.12 對於不是「常住居民」的香港永久性居民，如他們在點算時刻之前的 6 個月內，在港逗留最少 1 個月但少於 3 個月，又或在點算時刻之後的 6 個月內，在港逗留最少 1 個月但少於 3 個月，不論在點算時刻他們是否身在香港，會被界定為「流動居民」。

報告結構

1.13 本報告書共有八章，涵蓋 2021 年人口普查由策劃至數據發布等各方

Coverage

1.10 The 2021 Population Census covers the Hong Kong Resident Population under the “resident population” approach. The “resident population” approach has been adopted to compile the population estimates of Hong Kong since August 2000. Such change is effected in view of the greater relevance of the “resident population” concept from a statistical theory standpoint in measuring the population size of a place. It is considered particularly appropriate to do so to take account of the current residency and mobility patterns of the Hong Kong population.

1.11 The Hong Kong Resident Population at the reference moment of the 2021 Population Census (i.e. 3:00 a.m. on 30 June 2021) covers “Usual Residents” and “Mobile Residents”. “Usual Residents” refer to two categories of people: (1) Hong Kong Permanent Residents who had stayed in Hong Kong for at least 3 months during the 6 months before or for at least 3 months during the 6 months after the reference moment, regardless of whether they were in Hong Kong or not at the reference moment; and (2) Hong Kong Non-permanent Residents who were in Hong Kong at the reference moment.

1.12 For those Hong Kong Permanent Residents who were not “Usual Residents”, they were classified as “Mobile Residents” if they had stayed in Hong Kong for at least 1 month but less than 3 months during the 6 months before or for at least 1 month but less than 3 months during the 6 months after the reference moment, regardless of whether they were in Hong Kong or not at the reference moment.

Report structure

1.13 This report consists of eight chapters, covering different aspects of the 2021 Population

面。策劃的工作早於 2018 年已開展，第 2 章闡述 2021 年人口普查的策劃工作。

1.14 決定 2021 年人口普查的內容並不是一個簡單的過程。2021 年人口普查的數據項目是經過廣泛諮詢後才落實的。諮詢過程及選定數據項目的準則載於第 3 章內。

1.15 2021 年人口普查採用多模式數據搜集方法。住戶可填交網上問卷、致電人口普查服務中心進行電話訪問或寄回已填妥的紙本問卷（接受簡單點算的住戶適用），以提供所需數據。此外，跟 2016 年中期人口統計一樣，2021 年人口普查的統計員以平板電腦取代紙張問卷進行面談訪問，向住戶搜集數據。從不同模式搜集得的數據均經過一系列電腦系統處理，方可進行分析及發布。第 4 章載列數據搜集方法、外勤工作組織及程序，以及數據處理工作的詳情。

1.16 在 2021 年人口普查中，全港約九成住戶接受簡單的點算，只須提供住戶成員的基本人口特徵資料；其餘約一成住戶接受詳細的訪問，提供住戶成員多方面的人口及社會經濟特徵的資料。第 5 章概述 2021 年人口普查的樣本設計及估計程序。

1.17 2021 年人口普查是一項規模大而複雜的工作。本處雖然已盡力確保數據搜集、審核和處理過程完善，以及所得出的結果準確，但數據仍有機會存在些微誤差。第 6 章評估人口普查所搜集數據的質素。

Census from planning to data dissemination. Well before the Census, planning had already started in 2018. A general account of the planning work for the 2021 Population Census is given in Chapter 2.

1.14 Determination of the 2021 Population Census content is not a simple process. Extensive consultations had been conducted before finalising the data topics to be included in the 2021 Population Census. Chapter 3 describes the consultation process and the factors considered in choosing the topics.

1.15 The 2021 Population Census adopted a multi-modal data collection approach. Households could provide the requested data by completing the OQ, calling the CSC to conduct a TI or mailing back the completed paper questionnaire (applicable to households subject to simple enumeration). In addition, as in the 2016 Population By-census, census officers of the 2021 Population Census used mobile tablets instead of paper questionnaires to collect data from households during face-to-face interviews. Data collected via different modes were processed through a number of computer systems before being analysed and disseminated. The data collection method, fieldwork organisation and operational procedures as well as data processing details are contained in Chapter 4.

1.16 In the 2021 Population Census, about nine-tenths of the households were subject to simple enumeration to provide basic demographic information of their household members, while the remaining one-tenth of the households were subject to more detailed enquiry on a broad range of demographic and socio-economic characteristics of their household members. Chapter 5 summarises the sample design and estimation procedures of the 2021 Population Census.

1.17 The 2021 Population Census is a large-scale and complex operation. Although every effort was made to ensure that the collection, validation and processing of data were complete and the final results were accurate, there remained a chance that some errors may still be found in the data. Chapter 6 makes an assessment of the quality of data collected in the 2021 Population Census.

1.18 本報告書最後兩章（即第 7 章及第 8 章）提供 2021 年人口普查內所有數據項目及地理分區系統的分類、概念及定義。這些資料讓數據使用者更了解 2021 年人口普查的統計數據，方便他們在有需要時決定及界定數據要求。

1.18 The last two chapters (i.e. Chapters 7 and 8) in this report provide the classifications, concepts and definitions for all data topics covered and on the geographical demarcation systems adopted in the 2021 Population Census. Such information helps data users better understand about the statistical data of the 2021 Population Census, facilitating them to determine and specify their data requirements where necessary.

代號

1.19 本刊物內各代號的含意如下：

-	零

N.A.	沒有數字
0.0	少於 0.05%

Symbols

1.19 The following symbols are used throughout the publication :

-	Nil
..	Not applicable
N.A.	Not available
0.0	Less than 0.05%

零的數字及數值小的數字

1.20 本報告內以「-」代表零的數字。不過，由於當中根據抽樣調查所作的估算有抽樣誤差，所以零的數字可能是指一個數值小的數字而非零。同樣地，數值小的數字亦存有較大的抽樣誤差，故須小心闡釋。

Nil figures and figures of small magnitude

1.20 Nil figures are indicated by “-” throughout this report. However, it should be noted that since estimates based on sample enquiry are subject to sampling error, a nil figure may mean a figure of a small magnitude but not zero. Similarly, figures of small magnitude are also subject to relatively large sampling error and should be interpreted with care.

數字的捨入

1.21 由於統計表內數字經四捨五入，分項總和未必與總數相等。

Rounding of figures

1.21 Figures in the tables may not add up to the total due to rounding.

2. 策劃

人口普查辦事處

2.1 2021 年人口普查的策劃工作始於 2018 年。在考慮到過往人口普查及中期人口統計的經驗、諮詢不同數據使用者對人口普查數據項目的意見，以及參考其他國家／地區進行人口普查／中期人口統計的最新路向後，政府統計處於 2019 年 2 月擬定了 2021 年人口普查的計劃書，它概述 2021 年人口普查問卷內容、數據搜集方法、外勤工作程序、數據處理的策略及方法、所需職員及整體財政預算等各方面的建議。該計劃書於 2019 年 3 月呈交政府當局審閱。

2.2 本處於 2019 年 4 月成立了「2021 年人口普查辦事處」，以籌備及進行 2021 年人口普查工作。辦事處設有四個不同的科別。常設的普查及人口統計科負責樣本設計和估算方法、問卷設計、立法事宜及統計設算；於 2019 年 4 月分別成立的普查策劃科（一）負責制定多模式數據搜集方法的運作程序及處理有關數據處理和發布的事宜；而普查策劃科（二）負責更新屋宇單位及小區檔案、組織外勤工作、訓練和調配臨時外勤工作人員、監管外勤訪問工作、推展宣傳活動以及支援行政工作；另外，普查電腦系統科則負責為 2021 年人口普查提供電腦系統服務，包括設計及開發電腦系統。

2. Planning

Population Census Office

2.1 Planning for the 2021 Population Census started in 2018. After taking into account the experience from the past population censuses and by-censuses, consulting data users on the data topics for the Census and making reference to the latest directions adopted in the population censuses/by-censuses of other countries/ territories, the master plan of the 2021 Population Census was drawn up in February 2019 by the Census and Statistics Department. It summarised the proposals on the content of the 2021 Population Census questionnaire, data collection approach, fieldwork operational procedures, data processing strategy and methods, staff requirements and overall budget. The plan was considered by the Administration in March 2019.

2.2 The “2021 Population Census Office” was established in April 2019 to prepare for and carry out the 2021 Population Census. There were four different branches in the office. The permanent Census and Demographic Statistics Branch was responsible for sample design and estimation method, questionnaire design, legislative matters and statistical imputation. Set up in April 2019, the Census Planning Branch (1) was responsible for formulation of operational procedures of the multi-modal data collection approach and matters related to data processing and dissemination; and the Census Planning Branch (2) was engaged in updating the registers of quarters and segments, organising fieldwork, training and deploying temporary field workers, supervising the fieldwork, implementing publicity activities and supporting administrative work. Meanwhile, the Census System Services Branch was responsible for the provision of computer system services including the design and development of computer systems for the 2021 Population Census.

統計調查設計

2.3 在 2021 年人口普查，全港約九成住戶接受簡單的點算，只須提供住戶成員的基本人口特徵資料；其餘約一成住戶接受詳細的訪問，提供住戶成員多方面有關人口及社會經濟特徵的資料。因此，人口普查採用了兩種問卷，即「短問卷」及「長問卷」。

2.4 2021 年人口普查用作簡單點算的「短問卷」只涵蓋一些基本問題，而用作詳細訪問的「長問卷」則除包括「短問卷」的問題外，亦包括有關人口的社會經濟特徵資料以及住戶和屋宇單位特徵資料的詳細問題。結合「短問卷」及「長問卷」所搜集到的共有資料，可提供人口基本特徵資料的全面點算結果，並作為透過「長問卷」所搜集到的詳細社會經濟特徵資料的估算基礎。訪問項目的詳情載於第 3 章內，附錄 II 及附錄 III 則分別載有兩份紙張版問卷的參考樣本。

人口普查的法定地位

2.5 2021 年人口普查是按照《普查及統計（2021 年人口普查）令》的規定而進行。該命令由行政長官會同行政會議根據香港法例第 316 章《普查及統計條例》第 9 條的規定而制定。根據有關條例，指定人士必須填寫人口普查的統計表格（即問卷），以提供所需的資料，而本處必須對可識別個別住戶或個別人士的資料予以嚴加保密，不得向外洩露。為 2021 年人口普查而收集或接獲的所有已填寫的統計表格，以及該等統計表格的所有副本必須於 2022 年 6 月 22 日或之前銷毀。

Survey design

2.3 In the 2021 Population Census, about nine-tenths of the households were subject to simple enumeration to provide basic demographic information of their household members, while the remaining one-tenth of the households were subject to more detailed enquiry on a broad range of demographic and socio-economic characteristics of their household members. Therefore, two types of questionnaire, namely the “Short Form” and the “Long Form”, were used.

2.4 The “Short Form” used in the 2021 Population Census, which was used in the simple enumeration, covered only some basic questions. On the other hand, the “Long Form”, which was used in the detailed enquiry, included not only those questions covered in the “Short Form”, but also additional ones related to the socio-economic characteristics of the population and the characteristics of households and quarters. Taking together the common information collected in both the “Short Form” and “Long Form” gave the complete enumeration results on basic characteristics of the population. It also formed the basis for estimation of the detailed socio-economic characteristics collected through the “Long Form”. Details on the topics of enquiry are given in Chapter 3. A specimen of the paper version of each of the two questionnaires is shown in Appendix II and Appendix III respectively.

Legal status of the Population Census

2.5 The 2021 Population Census was conducted under the Census and Statistics (2021 Population Census) Order, made by the Chief Executive in Council under section 9 of the Census and Statistics Ordinance (Laws of Hong Kong, Chapter 316). Under the Ordinance, specified persons are obliged to supply the required information by completing the schedule of the Census (i.e. the questionnaire). The same Ordinance stipulates that their answers are to be treated in strict confidence and no information relating to any identifiable person or household will be released. All completed schedules collected or received for the 2021 Population Census and all copies of the schedules had to be destroyed on or before 22 June 2022.

個人資料的保障

2.6 2021年人口普查搜集所得的資料會編製成統計數字，供發布及分析研究之用。本處已透過一系列措施確保個別人士和個別住戶的資料絕對不會洩露。

2.7 首先，為確保搜集資料的過程安全，本處在各方面包括存置中央應用系統的數據中心、資料儲存及傳輸、供外勤訪問使用的平板電腦流動問卷應用程式、各電腦系統組件的存閱權限，以及統計員訓練等不同範疇，實行了嚴格的保安措施。當中，在資料傳輸方面，從不同渠道（包括住戶自行填報和統計員進行的電話及面談訪問）搜集的所有資料均會加密傳送到數據中心，而透過面談訪問以平板電腦搜集的資料，在上傳到數據中心後，電腦系統會自動刪除暫存在平板電腦上的資料，以進一步提高資料保安的程度。另外，所有臨時外勤工作人員（包括統計員）均需要宣誓，將所搜集的資料嚴加保密。

2.8 為方便在有需要跟進訪問或澄清搜集所得的資料時識別受訪者，搜集資料時會詢問住戶內每名受訪者的「姓名／稱號」，但「姓名／稱號」乃受訪者自願提供，因此，所得的「姓名／稱號」一般都不完整（例如只有姓或名）。

2.9 《普查及統計（2021年人口普查）令》規定，全部已填寫的2021年人口普查問卷及該等問卷的所有副本必須於2022年6月22日或以前銷毀。數據搜集階段結束後，在本處的職員嚴密監督下，所有2021年人口普查的紙張問卷

Protection of personal data

2.6 All information collected in the 2021 Population Census was used for compiling statistics for publication and analyses. A number of measures were implemented to ensure that no individual personal and household information would be divulged.

2.7 First, to ensure a secure data collection process, stringent security measures were implemented in various aspects such as the data centre for hosting the central application system, data storage and transmission, the mobile questionnaire app installed in the mobile tablets for data collection, data access right control on various system components and training given to enumerators. In particular, in the aspect of data transmission, all data collected through different channels (including self-enumeration by households as well as telephone and face-to-face interviews conducted by enumerators) were transmitted in encrypted format to the data centre. Furthermore, for data collected using mobile tablets during face-to-face interviews, the transient data stored in mobile tablets were erased automatically once they were uploaded to the data centre, with a view to further strengthening data security. Besides, all temporary field workers (including enumerators) were required to take an oath of secrecy and treat the collected information in strict confidence.

2.8 To facilitate identifying the right respondent in follow-up interviews or for clarifications about the collected data, “Names/ Preferred names” of individual respondents in the same household were asked for during data collection. However, the “Names/ Preferred names” were voluntarily provided by the respondents. Hence, the “Names/ Preferred names” provided were not always in full (e.g. in the form of last name or first name).

2.9 As stipulated in the Census and Statistics (2021 Population Census) Order, all completed questionnaires and all copies of the questionnaires of the 2021 Population Census had to be destroyed not later than 22 June 2022. After the end of the data collection stage, under the close supervision of the staff

(包括留給未能接觸／沒有回應住戶的自填問卷、點算特定組別人士所使用的特別設計表格和查點後的覆核統計調查的問卷(詳述於第4章及第6章))及有關外勤工作記錄的人口普查文件已於2022年3月底前銷毀。此外，透過利用符合政府資訊科技保安指定規格的清除軟件，所有供外勤訪問使用的平板電腦內的資料已於2021年12月底前銷毀，而電子問卷及儲存在進行人口普查期間所使用的電腦系統內所有搜集得的資料則於2022年6月22日前銷毀。

2.10 在數據處理及發布階段中，為避免個別人士或住戶的資料可被識別，本處已刪除所有電腦資料檔案(包括供數據發布用的數據庫)內能使人識別個別人士及住戶的資料如住戶檔號、地址和姓名／稱號，因此人口普查資料現只以不記名的方式儲存，以作數據發布及分析用途。此外，本處亦已採取足夠的措施，包括在進行估算時應用了合適的統計方法(見第5章的第5.15段)，以進一步確保任何人士均無法從發布的2021年人口普查結果中推斷得到個別人士及住戶的資料。所有上述方法旨在保障受訪者在2021年人口普查中所提供的個人及住戶資料得以絕對保密。

抽樣框

2.11 在點算陸上人口(不包括特定組別人士)方面，2021年人口普查採用的抽樣框包括兩部分。已建設地區(包括新市鎮)備有永久性屋宇單位檔案，詳列各單位的地址，以供辨別。每個地址均是獨一無二的，分別載列門牌、街道名稱、大廈名稱、層數及單位號數等資料。該檔案儲存在電腦系統內，以便

of this department, all paper questionnaires (including self-administered questionnaires for non-contact/ non-response households, specially designed forms used in special class enumeration and the Post Enumeration Survey questionnaires (see Chapters 4 and 6 for details)) and related fieldwork documents for the 2021 Population Census operation were destroyed by end-March 2022. In addition, using the secure deletion software in compliance with the government IT security requirements, data in all mobile tablets used for field visits were destroyed by end-December 2021, while all electronic questionnaires and all collected data stored in the computer systems used during the Census operation were destroyed by 22 June 2022.

2.10 At the data processing and dissemination stage, in order to avoid the identification of a particular person or household, information which enables identification of individual persons and households, such as household reference numbers, addresses and names/preferred names of respondents, had been completely removed from all the computer data files (including the dataset for data dissemination) with data now only be kept in anonymous form for data dissemination and analysis purposes. Furthermore, adequate measures including the application of an appropriate statistical technique during the estimation stage (see Paragraph 5.15 of Chapter 5) had been taken to further ensure that individual personal and household information cannot be deduced from the published results of the 2021 Population Census. All these measures serve to protect the confidentiality of personal and household information provided by respondents to the 2021 Population Census.

Sampling frame

2.11 The sampling frame for the land enumeration (excluding the special class enumeration) of the 2021 Population Census consists of two parts. For the built-up areas (including new towns), there is a list of permanent quarters, each of which can be identified by an address. Each address is unique with details of the house number, street name, building name, floor number and flat number. The list is stored

修訂及檢索。這檔案系統稱為「屋宇單位檔案庫」，於 1984/85 年設立，以便進行 1986 年中期人口統計。及後該檔案定期更新，更新工作是根據房屋署及屋宇署等方面有關拆卸舊樓及興建新樓的資料進行。至於未建設地區，則備有「小區檔案庫」。每個小區包括 8 至 15 個屋宇單位，並按一些自然或容易辨識的分界，如小溪、行人路、小巷及溝渠來劃分。在進行 2021 年人口普查前，本處透過實地考察，進行了一次全面的小區更新工作，把小區分界重新劃分，並確保各新劃定的小區包括數目相若的屋宇單位。

2.12 另外，為確保有關分間樓宇單位的數據質素，本處在進行 2021 年人口普查前，透過實地考察，識別有較多分間樓宇單位的樓宇及地區，更新了「屋宇單位檔案庫」和「小區檔案庫」的相關資料。這些資料既有助設計一個合適的抽樣方法以點算分間樓宇單位，亦有助有效地分配 2021 年人口普查外勤工作個案。

2.13 本處備有一個「數碼化地圖系統」以支援 2021 年人口普查及其他住戶統計調查的外勤工作。使用數碼化地圖向統計員提供更準確及最新的地理資料，有助提高資料的質素。

2.14 點算水上人口包括住在漁船和遊艇的住戶。漁船方面，本處依據香港水道及海岸目標物的方位，把避風塘及船隻停泊處劃分為一些水上小區。每個水上小區包括約 60 艘船艇。水上小區抽樣框是依據 2021 年第 1 季從空中拍攝的本港水域內所有停泊處的照片而建立

in the computer system for easy updating and retrieval. It is known as the “Register of Quarters”, which was set up in 1984/85 for the 1986 Population By-census and is updated regularly afterwards. The updating is based on the information on the demolition of old buildings and the construction of new buildings, which is available from various sources including the Housing Department and the Buildings Department. For the non-built-up areas, there is a list of area segments known as the “Register of Segments”. Each segment contains some 8 to 15 quarters and is delineated by some physical or easily identifiable boundaries such as streams, footpaths, lanes and ditches. A full-scale updating for segments was conducted before the 2021 Population Census through field verification. The segment boundaries were re-delineated, maintaining that the number of quarters in each segment is more or less the same.

2.12 Besides, to ensure the data quality regarding subdivided units, buildings and districts with higher prevalence of subdivided units had been identified through field observations before the 2021 Population Census. Relevant information had then been updated in the “Register of Quarters” and the “Register of Segments”. Such information was useful for devising an appropriate sample design for enumerating subdivided units, and could also facilitate the effective allocation of fieldwork assignments of the 2021 Population Census.

2.13 A “Digital Mapping System” was maintained to support the use of digital maps in the operation of the 2021 Population Census as well as other household surveys. The use of digital maps helped improve data quality through providing enumerators with more accurate and up-to-date geographical data.

2.14 Marine enumeration covered households residing on fishing boats and pleasure craft. Regarding fishing boats, marine sections in Hong Kong were delineated by dividing the typhoon shelters and anchorages into small sections by fairways/ firelanes in waters and bearings to landmarks on the coast. Each marine section consisted of about 60 vessels. The

小型試驗性統計調查及測試性統計調查

2.15 本處於 2019 年 11 月 1 日至 12 月 4 日進行了一次包括約 3 000 個屋宇單位的小型試驗性抽樣統計調查，以測試 2021 年人口普查的問卷設計和運作，以及就相關安排徵詢住戶的意見。

2.16 此外，本處於 2020 年 6 月 23 日至 8 月 4 日進行了一次測試性統計調查。測試性統計調查涵蓋四個選定區議會分區，包括灣仔區、深水埗區、葵青區及沙田區，合共約 40 000 個屋宇單位。測試性統計調查主要是作為 2021 年人口普查的總綵排，藉此落實所有執行上的細節安排。

2.17 因應 2019 冠狀病毒病的疫情，本處早於 2020 年已制訂了一系列減少社交接觸及減低病毒傳播風險的工作安排及應變措施。測試性統計調查亦試行了以上措施，以評估其成效。

2.18 上述兩項統計調查完成後，本處均評估了問卷設計及運作上各個環節。所汲取的經驗對改進人口普查多方面的運作十分重要。

marine section frame was constructed based on the aerial photos of all anchorages in Hong Kong Waters taken in the first quarter of 2021. Regarding pleasure crafts, visits were paid to marina clubs to facilitate the enumeration of households residing on pleasure crafts.

Small-scale Test Survey and Pilot Survey

2.15 A Small-scale Test Survey of about 3 000 quarters was conducted from 1 November to 4 December 2019 to test the questionnaire design and operational arrangements of the 2021 Population Census and consult the views of households on the related arrangements.

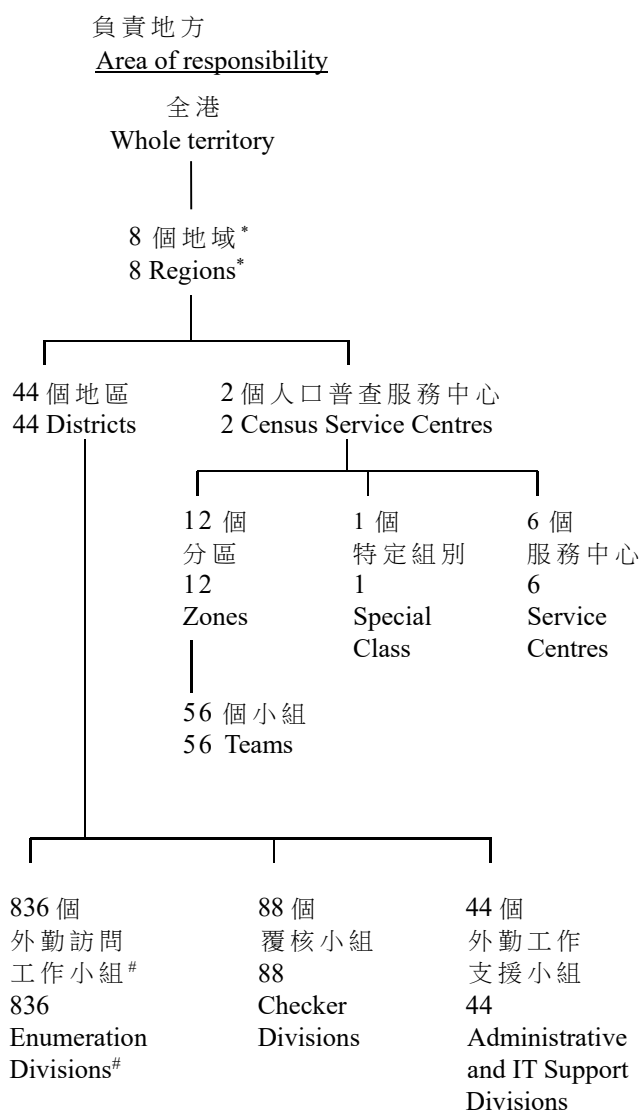

2.16 In addition, a Pilot Survey of about 40 000 quarters in four selected District Council districts, namely Wan Chai, Sham Shui Po, Kwai Tsing and Sha Tin districts, was conducted during 23 June to 4 August 2020. The pilot survey was mainly intended to serve as a dress rehearsal to confirm all the details of the 2021 Population Census.

2.17 In light of the evolving situation of the COVID-19 pandemic, work arrangements and contingency measures were drawn up to reduce social contact and the risk of virus transmission as early as in 2020. These measures were tested in the Pilot Survey to evaluate their effectiveness.

2.18 The questionnaire design and all aspects of the operation were evaluated after each of the two aforesaid surveys. The experiences gained were essential for improving many aspects of the Census operation.

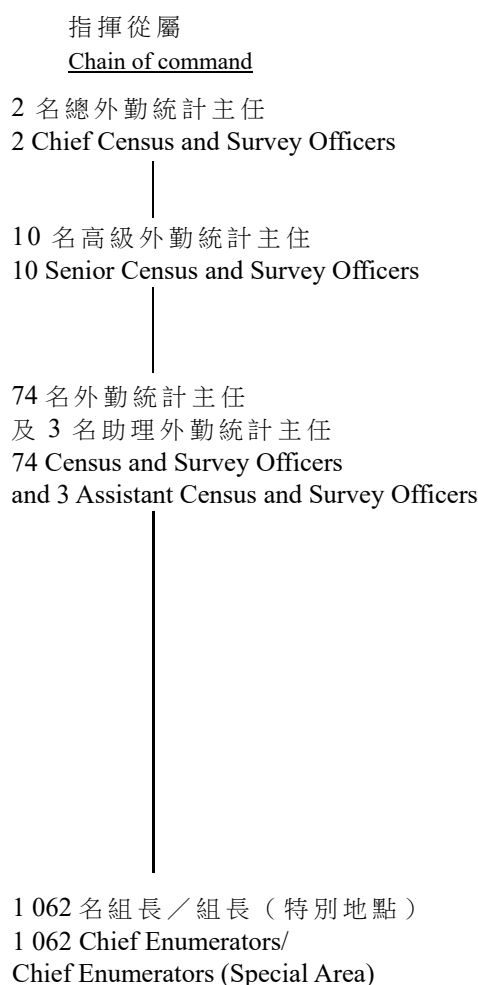

外勤統計工作組織架構

2.19 設於普查策劃科（二）的普查外勤組共有 89 名常設外勤統計人員，執行 2021 年人口普查的外勤統計工作。外勤統計工作的組織架構按下列層級組成：

Field organisation

2.19 The Census Field Sections of the Census Planning Branch (2) comprised 89 regular field staff for executing the fieldwork of the 2021 Population Census. The fieldwork was organised according to the following hierarchy:

Including Enumeration Divisions and Enumeration (Special Area) Divisions.

2.20 如上所述，最基層的工作單位是外勤訪問工作小組。工作小組由 1 名組長及平均 5 名統計員組成。組長是工作小組的領袖。統計員須探訪在其工作分配表上所有屋宇單位並訪問每個單位內所有住戶的所有成員，以搜集詳細資料。

2.21 各工作地區均設有獨立的覆核小組，負責品質檢核。覆核小組由 1 名組長及平均 7 名覆核員組成，負責查核外勤工作，以確保探訪按規定完成，並驗證所搜集的資料是否正確無誤。

2.22 每個地區皆設有工作站，站內平均有 19 個外勤訪問工作小組及 2 個覆核小組。工作站主任由常設的外勤統計人員擔任，另有 1 名助理支援工作站的日常管理工作。每個工作站亦設有一個外勤工作支援小組，平均由 2 名組長擔任秘書及 3 名工作站助理組成，負責電腦系統操作及支援工作站的運作。

2.23 此外，在 6 個不同的地區增設 6 個服務中心，每個服務中心由 1 名組長、2 名統計員及 2 名非華人助理組成，為不同種族人士提供即時傳譯服務和協助居住在分間樓宇單位的住戶提供所需的資料。

招聘工作

2.24 本處聘用了約 7 000 名臨時外勤工作人員進行 2021 年人口普查的工作。招聘分兩階段進行，第一階段招聘對象為專上學生和本地中／小學在職教師和教學助理。為加強對特定地點，如分間樓宇單位及工廠大廈等的點算工作，本

2.20 As illustrated above, the basic work unit was an Enumeration Division. An Enumeration Division comprised 1 Chief Enumerator and on average 5 Enumerators. The Chief Enumerator was the head of a division. The Enumerators had to visit all quarters in their assignment lists and conduct interviews to collect detailed information from all persons in all households found in the quarters.

2.21 There were independent Checker Divisions in individual districts responsible for the quality control work. Each Checker Division comprised 1 Chief Enumerator and on average 7 Checkers to conduct checks on fieldwork to see if field visits had been completed properly and verify whether the information collected was accurate.

2.22 A field centre, which accommodated on average 19 Enumeration Divisions and 2 Checker Divisions, was set up for each district. Regular field staff assumed the role of centre supervisor, who was underpinned by 1 assistant in the daily manning work of the field centre. In each field centre, there was an Administrative and IT Support Division comprising on average 2 Chief Enumerators as secretaries and 3 Centre Assistants who were responsible for operating the computer systems and supporting the operation of the field centre.

2.23 In addition, 6 Service Centres were set up in 6 different districts. Each Service Centre comprised 1 Chief Enumerator, 2 Enumerators and 2 non-Chinese helpers to provide simultaneous interpretation services for persons of different ethnicities and assist households living in subdivided units to provide the required information.

Recruitment

2.24 Some 7 000 temporary field workers were recruited for the 2021 Population Census. The recruitment was conducted in two phases. The first phase targeted post-secondary students, in-service teachers and teaching assistants of local secondary/primary schools. To strengthen the enumeration work

屆人口普查新開設了「統計員（特別地點）」及「組長（特別地點）」的職位，於第二階段進行公開招聘。

2.25 為配合住戶自行填報網上問卷，部分專上學生在 2021 年 6 月下旬開始獲聘任為統計員（人口普查服務中心），於兩個人口普查服務中心處理住戶的電話查詢及訪問預約，並協助住戶填報網上問卷。至於其餘的臨時外勤工作人員則主要是參與上門訪問的資料搜集工作（在 2021 年 7 月 18 日至 8 月 4 日期間進行），透過面談訪問向仍未完成問卷的住戶搜集資料。上述獲聘的臨時外勤工作人員獲分派擔任組長、組長（特別地點）、覆核員、統計員、統計員（特別地點）或工作站助理，他們主要在分布全港的 44 個工作站内工作。

2.26 早於 2020 年初，本處已開始聯絡各專上院校，為招聘臨時外勤工作人員作好準備。在 2020 年尾，本處亦舉行網上招聘講座，以喚起學生的興趣，積極參與 2021 年人口普查工作。

2.27 2021 年人口普查設有「網上職位申請系統」，透過互聯網接收七類臨時外勤工作人員職位（包括組長、組長（特別地點）、覆核員、統計員、統計員（人口普查服務中心）、統計員（特別地點）及工作站助理）的申請。整個招聘在 2020 年尾至 2021 年初分階段進行，目的是配合不同招聘對象可申請職位的甄選及培訓安排，同時有利於分階段處理大量職位申請。第一階段招聘共吸引約 15 600 人申請，包括約 3 800 名教師／教學助理及約 11 800 名學生。而第二階段公開招聘共吸引約 6 200 人申請。網上系統不但大幅度減省資料輸入

of specific places such as subdivided units and industrial buildings, the posts of “Enumerator (Special Area)” and “Chief Enumerator (Special Area)” were created in the 2021 Population Census. These posts were recruited in an open recruitment exercise in the second phase.

2.25 To tie in with the self-enumeration of OQ by households, some post-secondary students were employed as Enumerators (Census Service Centre) at the two Census Service Centres since late June 2021 to handle telephone enquiries and appointment booking from households, and to assist households to complete their OQ. The remaining temporary field workers were mainly employed to participate in the data collection work through face-to-face interviews (conducted from 18 July to 4 August 2021) to collect information from households that had not yet completed their questionnaires. These employed temporary field workers took up the positions of Chief Enumerator, Chief Enumerator (Special Area), Checker, Enumerator, Enumerator (Special Area) and Centre Assistant. They mainly worked in the 44 field centres across the territory.

2.26 As early as in the beginning of 2020, liaison with post-secondary institutions started, paving the way towards the recruitment of temporary field workers. In late 2020, online recruitment talks were conducted to arouse the interest of students to take up the 2021 Population Census jobs.

2.27 An “Online Job Application System” was launched in the 2021 Population Census, where the job applications for the seven types of temporary field worker positions, namely Chief Enumerator, Chief Enumerator (Special Area), Checker, Enumerator, Enumerator (Census Service Centre), Enumerator (Special Area) and Centre Assistant, were received through the Internet. The whole recruitment was launched by phase from late 2020 to early 2021, aiming to fit well with the selection and training arrangements for the various positions that could be applied by different recruitment targets while at the same time enabling the processing of a large number of job applications in phases. The first phase of recruitment

attracted some 15 600 applicants, including some 3 800 teachers/ teaching assistants and some 11 800 students. The second phase of open recruitment attracted some 6 200 applicants. The online system not only reduced significantly the required manpower and processing time for data input and validation, but also avoided the consumption of a large volume of paper as job application forms.

甄選及訓練

Selection and training

2.28 臨時外勤工作人員的甄選及培訓工作在 2021 年 2 月至 7 月期間進行。

2.28 The selection and training of temporary field workers were conducted during February to July 2021.

2.29 在招聘工作的初期，初步入選的申請人須出席面試及在「網上告示板」完成網上習作。本處根據他們網上習作的成績以及面試表現，初步聘任合適的申請人並安排他們參加基本培訓。

2.29 In the initial stage of the recruitment, shortlisted applicants were required to attend a selection interview and complete online exercises on the “Online Notice Board” (ONB). Suitable candidates were provisionally appointed based on their results of the online exercises and performance in the selection interview. They were then invited to attend the general training.

2.30 由於申請人數目眾多，在決定邀請多少申請人參加遴選面試及出席培訓課程時，本處須考慮兩個因素。一方面，行政及培訓成本會隨參加人數而上升；但另一方面，增加參加人數可確保有充足的候選人在短時間內填補有關的空缺。經平衡這兩個因素後，在整個招

2.30 As the number of applicants was large, two factors were considered in determining the number of applicants shortlisted for selection interviews and invited for training. On the one hand, the administrative and training costs would be higher if more participants were involved. On the other hand, involving more participants would provide a larger

聘過程中，本處共甄選約 19 800 名申請人參加遴選面試，當中約 7 600 人（包括列於聘任人的候補名單）曾出席所需的培訓課程。

2.31 獲初步聘任的組長及組長（特別地點）申請人會獲邀出席由本處外勤統計主任職系人員提供的一個 8 小時基本培訓課程。

2.32 為配合大量覆核員及統計員的培訓，本處採用了「培訓導師」的方法，即由已受訓的組長向覆核員及統計員提供一個 8 小時的培訓課程。

2.33 在 2021 年 7 月上旬，獲派進行外勤工作的組長、覆核員及統計員均需要出席一個 8 小時的複修課程，讓他們重溫訪問及點算方法，以及提醒他們重要的點算概念和有關工作方面的主要環節。本處在複修課程中講解減少社交接觸的工作安排及防疫指引，以保障他們及受訪者的安全。此外，在複修課程中亦向他們講解於外勤工作期間預防被狗隻襲擊的措施及安全裝備的用法，為 2021 年人口普查的外勤工作進行最後階段的準備。

2.34 另一方面，本處亦為派駐在人口普查服務中心工作的統計員提供另一特別設計的複修課程。除重溫問卷內容外，課程亦向統計員講解有效處理電話查詢及進行電話訪問的技巧，並介紹各個設於人口普查服務中心的電腦系統的操作。

reserve pool of candidates for immediate replacement of the drop-outs. Balancing these two factors, some 19 800 applicants were shortlisted for attending selection interviews and, among them, about 7 600 (including those put on waiting list of appointees) attended the required training.

2.31 Shortlisted Chief Enumerator and Chief Enumerator (Special Area) applicants were invited to attend an 8-hour general training course provided by Census and Survey Officer grade staff of the department.

2.32 To train such a large number of Checkers and Enumerators, a “train-the-trainer” approach was adopted, with the trained Chief Enumerators to provide an 8-hour training course to Checkers and Enumerators.

2.33 In early July 2021, Chief Enumerators, Checkers and Enumerators deployed to conduct fieldwork were required to attend a refresher training lasting for 8 hours, which enabled them to review and recapitulate the methods of interviewing and enumeration. Opportunity was taken to remind them of the important concepts of enumeration and major aspects of the operation. They were also briefed about the work arrangements to reduce social contact and anti-epidemic guidelines in the refresher training to protect their own safety as well as the safety of the respondents. Moreover, measures on preventing dog attack during fieldwork operation and the use of safety equipment were introduced in the refresher training. This contributed to the final stage of preparation for the fieldwork operation of the 2021 Population Census.

2.34 On the other hand, another specially designed refresher training was provided to those Enumerators deployed to work in the Census Service Centres. In addition to revisiting the content of the questionnaire, the training also equipped them with effective skills in handling telephone enquiries and conducting telephone interviews, as well as introducing the operation of various computer systems set up at the Census Service Centres.

2.35 此外，工作站助理的培訓主要由本處統計主任職系人員負責，以在職培訓形式進行。培訓內容涵蓋在各工作站的外勤工作支援小組的主要工作，以及設於工作站的電腦系統的操作。

2.35 Furthermore, on-the-job training was adopted for training of Centre Assistants, which was mainly conducted by Statistical Officer grade staff of this department. The training covered an overview of the major duties of the Administrative and IT Support Division in each field centre and operation of computer systems set up in field centres.

學員正在接受訓練

2.36 各培訓課程以播放一套培訓影片為主，內容包括示範到訪不同類別的住戶、闡釋問卷數據項目的定義及用途、以及提醒外勤人員要注意人身安全等。透過培訓影片進行培訓工作，不但可劃一培訓內容，亦可提高學員的興趣。培訓課程並輔以培訓教案、習作及模擬訪問個案研習，有助增加培訓課程的成效。

2.36 A set of training film was broadcast during the training course, including demonstrating visits to different types of households, illustrating the definition and usage of the questionnaire data items, and reminding the field staff of their personal safety, etc. The showing of training film in the training course not only standardised the training contents, but also aroused the interest of the trainees. Training manuals, exercises and case studies of mock interviews were also used to enhance the effectiveness of the course.

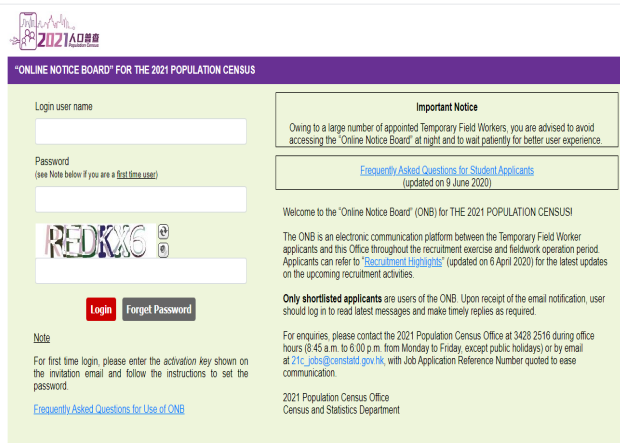

培訓影片及工作手冊

2.37 為更有效地及以無紙化的方式與臨時外勤工作人員溝通，本處設立了「網上告示板」，輔以電郵通知他們最新的招聘及培訓資訊，收集他們的回覆，以及發放網上習作和各工作手冊，供網上自行學習。此外，該系統亦提供臨時外勤工作人員查看和編輯他們的個人資料和申請發還交通費記錄等功能。

為受訪者而設的服務

2.38 本處於 2021 年 6 月 23 日至 8 月 31 日設立了兩個人口普查服務中心。該中心每日上午 9 時至晚上 10 時運作，以處理市民就 2021 年人口普查的查詢，包括核實統計員身分、處理訪問預約及回答一般查詢，以及向受訪者提供電話訪問服務。此外，中心亦聘用不同種族的助理提供即時傳譯服務，以協助不同種族的人士完成問卷。

網上告示板
Online Notice Board

2.37 For more effective and paperless communication with the temporary field workers, an “Online Notice Board” was set up, which was facilitated by emails to notify them about the latest recruitment and training information, collect their replies and distribute online exercises and training manuals for self-study online. Furthermore, the system also provided functions for temporary field workers to view and edit their respective personal details and travel expense reimbursement records.

Services to respondents

2.38 Two Census Service Centres were set up from 23 June to 31 August 2021. The centres operated daily from 9 a.m. to 10 p.m. to handle enquiries from the public on the 2021 Population Census, including verifying the identity of the enumerators, handling appointments for interview and answering general enquiries, as well as to provide telephone interview service for respondents. In addition, helpers of different ethnicities were employed to provide simultaneous interpretation services to assist persons of different ethnicities in completing the questionnaire.

2.39 本處亦另設一條渠道供受訪者以網上方式預約訪問。受訪者可透過 2021 年人口普查網站登入「網上問卷及網上預約訪問系統」提出預約訪問要求，而負責訪問相關住戶的統計員可透過平板電腦獲取相關預約資料並跟進預約訪問事宜。

2.39 An additional channel was provided to respondents to make interview appointments online. Respondents could make appointment requests online using the “Online Questionnaire and Online Appointment System” on the 2021 Population Census website. Enumerators responsible for interviewing the households concerned could obtain the appointment information through their mobile tablets and follow-up on the appointment matters.

宣傳

Publicity

2.40 2021 年人口普查得以順利完成，實有賴市民合作提供所需的資料。而受訪者提供準確的資料，更是確保資料質素的重要元素。因此，在政府新聞處及不同機構的協助下，本處展開了大規模及針對不同界別人士的宣傳活動，以確保取得市民的全面合作。因應 2019 冠狀病毒病的疫情，宣傳活動重點鼓勵市民以網上問卷方式填報所需資料。其他宣傳訊息包括加強市民對 2021 年人口普查的認知、爭取受訪者的合作、強調個別人士及住戶的資料將會嚴加保密，以及提醒住戶小心核對統計員的身分及提防可疑郵件／電郵／來電。主要的宣傳活動包括：

2.40 Public cooperation in providing the required information was vital to the successful conclusion of the 2021 Population Census. Provision of accurate information by the public was an important factor in ensuring quality of the data collected. To this end, with the advice and assistance of the Information Services Department and a number of organisations, a large-scale publicity programme comprising various activities that targeted at different sectors was launched to secure full cooperation of the public. In view of the evolving situation of the COVID-19 pandemic, the main focus of the publicity campaign was to encourage households to submit the required information via OQ. Other publicity messages included enhancing public’s awareness of the 2021 Population Census, soliciting cooperation of the respondents, emphasising the confidentiality of the information relating to individual

persons and households, and reminding householders to check the identity of the enumerators and be alert of suspicious mails/ emails/ incoming calls. The major publicity activities included:

2.41 此外，為增加不同種族的人士對2021年人口普查的認識及爭取他們的合作，本處增設了一些針對不同種族人士的宣傳活動，包括：

2.41 In addition, some new dedicated publicity programmes were launched for persons of different ethnicities in the 2021 Population Census in order to raise their general awareness of the 2021 Population Census and to seek their cooperation, including:

- (iii) 聯絡服務不同種族人士的機構，透過向其成員發送宣傳訊息，爭取他們的支持；及
- (iv) 邀請不同種族的社群領袖拍攝短片，宣傳 2021 年人口普查。

2.42 宣傳活動在 2020 年 3 月起分階段進行，而在 2021 年 4 月初起至人口普查開始，各項宣傳活動更特別加強。宣傳活動在人口普查的各個階段發揮不同作用。例如本處於 2020 年 11 月至 2021 年 5 月舉辦「2021 年人口普查海報設計比賽及手機通訊程式貼圖創作比賽」，以增加市民對 2021 年人口普查的認識；而在 2021 年 5 月開始的巡迴展覽，則宣傳人口普查數據的用途及鼓勵市民使用網上問卷。

2.42 The publicity activities were carried out in phases from March 2020 onwards with more intensive publicity being rolled out in early April 2021 leading up to the Population Census operation. They served different purposes at different phases. For instance, in November 2020 to May 2021, the “2021 Population Census Poster Design Competition and Mobile Messaging Application Sticker Design Competition” was organised to raise public awareness of the 2021 Population Census. The roving exhibition which started in May 2021 publicised the use of Census results and encouraged the public to use the OQ.

2.44 人口普查進行期間，本處亦特別製作不同短片，以呼籲市民合作、鼓勵住戶填報網上問卷、強調所搜集的個別人士／住戶資料會嚴加保密，以及提醒市民提防可疑郵件／電郵／來電。有關短片安排於網上社交媒體播放。

2.44 During the conduct of the Population Census, different short videos were specially produced to solicit the support from the public, encourage households completing the OQ, emphasise the confidentiality of the information relating to individual persons and households, and remind householders to be alert of suspicious mails/ emails/ incoming calls. The short videos were broadcast on online social media.

2.45 在人口普查資料搜集期的首階段，本處安排播出第二集的電視宣傳短片及電台宣傳聲帶，以鼓勵住戶以網上問卷、電話訪問及郵寄問卷（接受簡單點算的住戶適用）填交所需資料，以保持社交距離及減低病毒傳播的風險。為確保這些信息有效地滲入社會各階層，宣傳計劃透過多個媒介及方法進行，包括海報、報章廣告、巴士、公共小型巴士及的士車身廣告、戶外外牆的巨型宣傳海報、戶外電視、欄杆橫額、電台及電視的政府宣傳聲帶及短片、互聯網及網上社交媒體等。

2.45 During the first phase of the data collection period of the Population Census, the second episode of the API was broadcast to encourage households to submit the required information via OQ, telephone interview and postal return (applicable to households subject to simple enumeration), in order to maintain social distance and reduce the risk of virus transmission. To ensure that the message permeated all sectors of the population effectively, the publicity programme involved a wide range of media and methods, including posters, newspaper advertisements, bus, public light bus and taxi body advertisements, outdoor giant wall banners, outdoor TV, railing banners, radio and TV APIs, the Internet and online social media, etc.

2.46 在統計員開始造訪仍未遞交所需資料的住戶前數天，本處安排播出第三集的電視宣傳短片及電台宣傳聲帶，以提醒住戶小心核對統計員的身分。

2.46 Just a few days before the enumerators started to pay visits to households that had not yet submitted the required information, the third episode of the API on reminding households to confirm the identity of the enumerators was broadcast.

2.47 本處於 2020 年 3 月初為 2021 年人口普查設立了一個主題網站 (www.census2021.gov.hk/tc/index.html)，以方便公眾人士取得有關的資料。本處於 2021 年 6 月中加強主題網站的內容及完善瀏覽的方法，藉以協助住戶更了解 2021 年人口普查的資料搜集的安排，例如如何使用網上問卷。住戶亦可透過主題網站進入網上問卷系統提供所需資料。主題網站其後用作支援數據發布的工作。

2.47 A thematic website for the 2021 Population Census (www.census2021.gov.hk/en/index.html) was set up in early March 2020 for the public to access the background information. The thematic website was suitably enhanced in respect of content and navigation in mid-June 2021 so as to facilitate households to know more about the data collection arrangements (e.g. how to use the OQ). Households could also enter the OQ system to provide the requested information through the thematic website. Subsequently, the thematic website was used to support the data dissemination work.

3. 人口普查內容

決定人口普查內容

3.1 在 2021 年人口普查進行前，本處早於 2018 年 7 月開始就 2021 年人口普查的內容，向各決策局、政府部門、諮詢及法定組織、選定機構（包括非政府機構及工商組織）及學術機構的相關學院／學系進行廣泛諮詢。統計諮詢委員會亦多次討論人口普查事項。

3.2 被諮詢的機構會首先被問及 2016 年中期人口統計所涵蓋的數據項目是屬於「必要」、「值得考慮」或「不需要」。結果顯示，2016 年中期人口統計內每一項目都被評為「必要」或「值得考慮」。諮詢的範圍亦包括鼓勵被諮詢的機構就在 2021 年人口普查加入新的數據項目提出建議。在諮詢期間，接獲的建議項目超過 60 項，當中包括「住戶淨財富」、「債務狀況」、「殘疾」、「需要照顧的長者」等。

3.3 在 2018 年 9 月，本處向各區議員諮詢有關 2021 年人口普查的事項。最後，本處於 2019 年 1 月向立法會財經事務委員會會議呈交「籌劃 2021 年人口普查」諮詢文件，以供討論。

考慮因素

3.4 在決定 2021 年人口普查所包括的數據項目時，本處主要考慮以下八個因素：

- (i) 數據是否有用 – 有關數據應廣泛被政府、研究人員及市民大

3. Population Census Content

Determination of the Population Census content

3.1 Well before the 2021 Population Census, extensive consultations on the 2021 Population Census content had been conducted since July 2018 with policy bureaux, government departments, advisory and statutory bodies, selected organisations (including non-governmental organisations and trade and industrial organisations) and relevant faculties/ departments in academic institutions. The Statistics Advisory Board also discussed the subject more than once.

3.2 Respondents to the consultation were first asked to indicate whether they would rate the topics covered in the 2016 Population By-census as “Essential”, “Desirable” or “Not required”. All topics in the 2016 Population By-census were rated as “Essential” or “Desirable”. The respondents were also asked to suggest new topics for the 2021 Population Census. Over 60 topics were suggested by various respondents in the consultation exercise. Some of the topics suggested were “household net wealth”, “loan situation”, “disability”, “elderly persons requiring care” etc.

3.3 The consultation on matters related to the 2021 Population Census moved on to the District Council Members in September 2018. Finally, the consultation paper on “Plan for the 2021 Population Census” was tabled for discussion at the meeting of the Panel on Financial Affairs of the Legislative Council in January 2019.

Factors considered

3.4 In deciding the topics for the 2021 Population Census, the following eight factors had been considered:

- (i) *Usefulness of data* – The data should be extensively used by the government,

- 眾採用，針對某些特殊目標而設的題目，不會包括在人口普查／中期人口統計內。
- (ii) 受訪者能否或是否願意作答 - 應包括受訪者能夠及願意提供足夠資料的項目。一些容易引起恐慌、帶歧視性質、被認為侵犯私隱或一般受訪者不能提供準確答案的題目，都應避免。
- (iii) 題目容易為統計員了解 - 無論所發問的問題及有關答案，都應為一般統計員容易了解，而無須為這些題目提供長時間及特殊的訓練。
- (iv) 是否有其他數據來源及資料搜集渠道 - 人口普查／中期人口統計的強項是能夠為細小分區及特定人口分組提供可信的統計數字。可以從其他渠道也可或甚至更易獲取資料的數據項目，不應包括在人口普查／中期人口統計內。
- (v) 數據必須容易處理 - 考慮到成本效益及能及時發布結果，問題的答案必須能夠以簡單而成本低的程序處理。需要耗時費力的編碼及數據審核的項目，都不是理想的項目。
- (vi) 與以往人口普查／中期人口統計數據的可比性 - 盡量保留以往人口普查及中期人口統計的數據題目，方便分析轉變及趨勢。
- researchers and the public. Hence, topics which are for a very special purpose will not be included in the population censuses/by-censuses.
- (ii) *Willingness and ability of the respondents to answer* – The topics should be such that the respondents will be willing and able to provide adequate information. Questions which are likely to arouse fear or prejudice, which may be regarded as intrusion into privacy and which are too difficult for the average respondents to answer accurately should be avoided.
- (iii) *Ability of the enumerators to comprehend* – The topics should be such that the average enumerators can easily comprehend both the questions and the answers without having undergone prolonged specialised training.
- (iv) *Existence of other data sources/ data collection channels* – The strength of a population census/by-census lies in producing reliable statistics for small geographical areas and population sub-groups. Topics for which the data can be obtained equally well or better from other sources or by other means should not be included in the population censuses/by-censuses.
- (v) *Processing efforts* – For cost efficiency and timeliness of results, answers to the questions must be amenable to data processing by simple and cheap procedures. Topics which call for laborious coding and editing are not favoured.
- (vi) *Comparability of data with previous population censuses/by-censuses* – Topics included in the previous population censuses and by-censuses should be maintained as far as possible for studying the direction and progress of changes.

(vii) 訪問需要在合理的時間內完成
- 人口普查／中期人口統計不應涵蓋太多問題，而問題亦不應太複雜和要求太多訪問提示，只應包括一些簡單、直接和探討事實的題目。

(viii) 聯合國的建議及國際間的標準
- 應盡量採納聯合國的有關建議及國際間的標準。

3.5 需要特別注意的是，人口普查並不宜用作搜集某些需要詢問詳細及特訂問題的專題研究的數據。其中一個例子是「殘疾」。由於問題比較敏感而且概念繁複，有關問題只應由有經驗及曾受有關訓練的統計員處理。2021年人口普查涉及非常大規模的運作，動員的統計員數以千計，根據國際慣例，只應處理比較一般的問題。即使嘗試在人口普查搜集有關資料，亦未必能夠獲得可靠的數據。一個較可取的方法是利用特別設計的專題統計調查，搜集有關數據。

3.6 每一個建議項目都會就以上八個因素作小心評估。一項關於「需要照顧的長者」（包括其主要照顧者）的建議項目最終被納入2021年人口普查，以評估長者對照顧及支援服務的需求，並搜集其照顧者的基本資料。餘下的建議項目主要屬專題探討，比較適合放在其他專題統計調查內。此外，我們亦在現有「就學情況」的數據項目下，新增「就讀學校的類型」（如官校、津校、直資等）的指明事項，以就教育相關的課題進行更深入的分析，例如研究社會經濟特徵與接受不同類型機構提供的教育機會的關係。

(vii) *Keeping the interviewing time within reasonable length* – A population census/by-census should not include too many questions or questions that require detailed probing. Only relatively simple, straight-forward fact-finding questions should be included.

(viii) *Recommendations of the United Nations and international practices* – The recommendations of the United Nations and international standards should be followed as far as possible.

3.5 It should be noted that the Population Census is not an appropriate avenue for collecting data on *special themes* which require detailed and specialised questions to be asked. An example would be “disability”. As the questions often involve complex concepts and/ or are sensitive in nature, they should only be handled by enumerators with considerable experience and relevant training. Since the 2021 Population Census is an operation of a vast scale, involving thousands of enumerators, it is the international practice that only the more general topics are tackled. Even if attempted, it cannot be expected that reliable data can be obtained for the special themes. A better alternative is to mount specialised thematic surveys to collect such data.

3.6 Each topic suggested in the consultation exercises was carefully evaluated against these eight factors. One suggested topic regarding “elderly persons requiring care” (including primary carer) was finally incorporated into the 2021 Population Census, to gauge the demand of elderly persons for care and support services and obtain basic information on their carers. For the rest of the suggested topics, they are mainly related to specialised themes, which are more suitable for inclusion in other thematic surveys. In addition, “type of school” (e.g. Government schools, Aided schools and Direct Subsidy Scheme schools etc.) was also incorporated under the data topic “School Attendance” to further analyse educational matters, for instance, to evaluate the relationship between socio-economic characteristics and education opportunities provided by various types of organisations.

4. 資料搜集及處理

資料搜集

4.1 2021 年人口普查的資料搜集期由 2021 年 6 月 23 日開始至 8 月 4 日完結，合共 43 天，分為兩個階段進行。概括來說，人口普查的資料是透過三項點算工作搜集所得：陸上人口、水上人口及特定組別人士的點算工作。各項點算工作的詳情在下面逐一說明：

陸上人口點算

4.2 2021 年人口普查採用多模式的數據搜集方法。首階段由 2021 年 6 月 23 日至 7 月 17 日，住戶可填交網上問卷、致電熱線進行電話訪問或寄回已填妥的紙本問卷（接受簡單點算的住戶適用），以提供所需數據。在次階段，即由 2021 年 7 月 18 日至 8 月 4 日，統計員到訪未完成問卷的住戶，利用平板電腦協助住戶提供所需的數據。以上四種數據搜集方法牽涉高度整合化的電腦系統，住戶可任意轉換提供所需資料的方法，並能保持資料的安全性及完整性。

(a) 網上問卷

4.3 由 2021 年 6 月 23 日起，本處分階段向居於有明確郵遞地址的陸上住戶寄發通知信，內附有關填報網上問卷、接受電話訪問和預約面談訪問的資訊。住戶收到通知信函後即可填交網上問卷。住戶填交網上問卷前須啟動網上問

4. Data Collection and Processing

Data collection

4.1 The data collection period of the 2021 Population Census lasted 43 days, from 23 June to 4 August 2021, which was divided into two phases. Broadly speaking, the Census data were collected through three enumeration operations, viz. the land enumeration, the marine enumeration and the special class enumeration. Details on each type of enumeration operations are described below:

Land enumeration

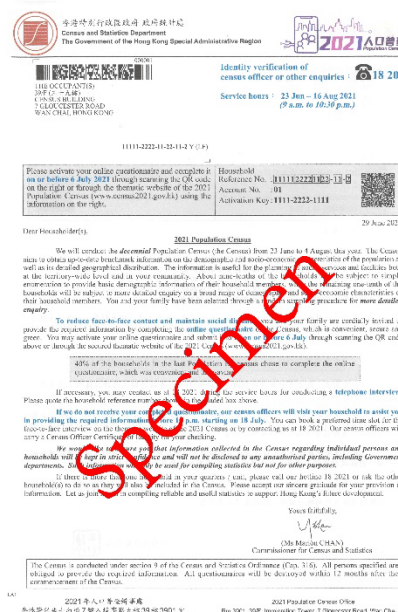

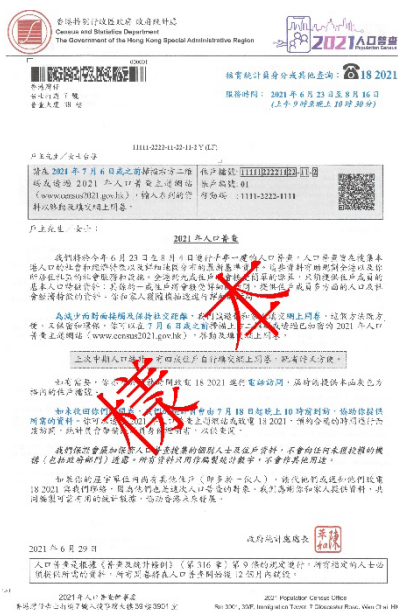

4.2 The 2021 Population Census adopted a multi-modal data collection approach. In the first phase of the data collection period from 23 June to 17 July 2021, households could provide the requested data by completing the OQ, calling the hotline to conduct a telephone interview or mailing back completed paper questionnaire (applicable to households subject to simple enumeration). During the second phase from 18 July to 4 August 2021, census officers visited households who had not yet completed the questionnaire so as to assist them in providing the requested data using mobile tablets. The computer systems involved in the above four data collection methods were highly integrated so that households might freely switch from one method to another in providing the required information, whilst safeguarding data security and integrity.

(a) Online questionnaire

4.3 Starting from 23 June 2021, a household notification letter, together with information on completing OQ, telephone interviews and making appointment for a face-to-face interview, was sent to individual land-based households with clearly identifiable postal addresses by phase. Households

卷帳戶。通知信（適用於接受詳細訪問的住戶）或紙本問卷（適用於接受簡單點算的住戶）上除印有啟動相關住戶專用的網上問卷帳戶的資料外，亦印有包含該帳戶資料的二維碼。受訪者可掃描該二維碼，以啟動其網上問卷帳戶，節省手動輸入啟動帳戶資料的時間。住戶啟動帳戶時，須提供聯絡資料及完成帳戶保安設定（包括設定網上問卷帳戶的密碼），以便日後再次登入該帳戶。

could complete their OQs upon receipt of the letter. Households were required to activate their OQ accounts before completing their OQs. Apart from the information for activation of the OQ account uniquely assigned to the household concerned, a Quick Response (QR) code containing information about the account was also printed on the notification letter (for households subject to more detailed enquiry) or the paper questionnaire (for households subject to simple enumeration). Respondents could scan the QR code to activate their OQ accounts, saving their time of typing the account activation information manually. Households were required to provide their contact information and complete the account security settings (including the setup of a password for the OQ account) during the account activation to facilitate subsequent logins.

4.4 住戶啟動網上問卷帳戶後可即時填報及遞交網上問卷，或可選擇登出帳戶，並在資料搜集期完結前使用已設置的密碼再次登入帳戶填交網上問卷。為鼓勵住戶盡快填交網上問卷，在安排統計員上門訪問前（即 2021 年 7 月 18 日或之後），本處會郵寄提示信給尚未啟

4.4 Households could proceed to complete and submit their OQs immediately after activating their OQ accounts. Alternatively, they could logout their accounts and use the passwords they had already set up to login their accounts again to complete and submit their OQs before the end of the data collection period. To encourage households to complete and submit their

4.5 網上問卷系統可即時檢測出需要住戶核實的數據，亦設有編碼搜尋功能，方便受訪者回答「行業」及「職業」等涉及詳細分類的問題。

4.6 一般情況下，網上問卷的帳戶是以住戶為單位。住戶在啟動帳戶的過程中可為個別選擇親自填交資料的成員申請獨立帳戶。其他住戶成員均不能查閱及更改各個別住戶成員獨立帳戶內的資料。

OQs as soon as possible, reminder letters were mailed to households that had not yet activated their OQ accounts before arranging census officers to conduct field visits (i.e. on or after 18 July 2021). Besides, SMS and e-mail reminder messages were sent from time to time to households that had activated their OQ accounts but not yet submitted their OQs. Eventually, over 85% of households that had activated their OQ accounts completed and submitted their OQs themselves. The remaining outstanding questionnaires were subsequently followed up by census officers.

4.5 The OQ system could carry out on-the-spot data validation checks to detect data that required verification by the households. A code-searching function was also available to assist respondents in answering questions involving detailed classifications such as “industry” and “occupation”.

4.6 Generally speaking, OQ accounts operated on a household basis. Households could apply for a separate account for each individual household member who would prefer providing his/ her own information by himself/ herself when activating their OQ accounts. Other household members could not access and edit information in the separate account of each individual household member.

2021 年人口普查的網上問卷 OQ of the 2021 Population Census

4.7 整體而言，有 842 000 個住戶選擇使用網上問卷提供資料，佔全港經點

4.7 A total of 842 000 households, or 37% of the enumerated households, chose OQ to provide

算住戶的 37%。按問卷類別分析，「短問卷」住戶及「長問卷」住戶的相應比例分別是 35%及 57%。「短問卷」住戶的比例較低的原因是「短問卷」住戶可選擇利用郵寄問卷作為另一項自行填報的方式。

(b) 郵寄問卷

4.8 除可使用網上問卷外，獲發通知信的「短問卷」住戶同時收到一份郵寄問卷以供選擇。本處並向「短問卷」住戶提供已付郵資的回郵信封，藉以提高回應率。

4.9 本處合共收到超過 110 萬份郵寄問卷。如考慮郵件送遞所需的時滯，估計約有 75%的郵寄問卷是在建議的回覆期限（即 2021 年 7 月 6 日）或之前寄回本處。由於郵寄問卷上的資料可應用數據輸入技術快速輸入電腦，因此幾乎所有這些在建議回覆期限前寄回的郵寄問卷在進行面談訪問前已完成初步的處理工作，統計員因而無須造訪有關的住戶。至於無效的回覆，例如空白問卷等，則會由統計員作出適當跟進，包括造訪或聯絡（如有提供電話號碼）有關住戶等。

4.10 經點算有效的問卷後，合共有 996 400 個住戶選擇以郵寄問卷提供資料，佔經點算的「短問卷」住戶的比例是 48%。

4.11 合計所有填交的網上問卷及郵寄問卷，2021 年人口普查自行填報的住戶佔全港經點算住戶的比率是 80%。

information. Analysed by questionnaire type, the corresponding proportions for “Short Form” households and “Long Form” households were 35% and 57% respectively. The relatively lower proportion for “Short Form” households is attributed to the availability of postal questionnaire as another self-enumeration option to “Short Form” households.

(b) Postal questionnaire

4.8 In addition to the use of OQ, each “Short Form” household in receipt of the notification letter was provided with a copy of postal questionnaire. A pre-paid return envelope was also given in order to boost the response rate.

4.9 Over 1.1 million postal questionnaires were received. About 75% of the postal questionnaires received were returned on or before the suggested deadline (6 July 2021) after taking into account the time lag in postal delivery. As information recorded on the postal questionnaires could be easily input into the computer through data capturing technology, almost all of these postal questionnaires were initially processed before the conduct of face-to-face interview and therefore census officers were not required to visit the households concerned. For those invalid postal returns such as blank forms, census officers would undertake appropriate follow-up actions, including visiting or contacting (if telephone number had been provided) the households, etc.

4.10 Effectively, a total of 996 400 households chose to provide information using postal questionnaire, representing 48% of all enumerated “Short Form” households.

4.11 Combining all the submissions of OQ and postal questionnaire, the overall self-enumeration proportion among all enumerated households in Hong Kong was 80% in the 2021 Population Census.

The image shows a screenshot of the online questionnaire interface for the 2021 Population Census, overlaid with a physical postal questionnaire form. The online interface includes sections for household information, personal details, and various demographic questions. The physical form is titled '2021 年人口普查' and 'Online Census: Convenient, Secure and Green'. It features a large QR code and instructions for returning the questionnaire by mail.

(c) 電話訪問

4.12 住戶除可透過致電人口普查服務中心查詢有關 2021 年人口普查及填報網上問卷的問題、確認統計員身分及預約面談訪問時間外，亦可要求人口普查服務中心進行電話訪問。人口普查服務中心的統計員使用電話查詢系統及電話訪問系統記錄向住戶搜集的資料。電話訪問系統是 2021 年人口普查新設的電腦系統，以提高訪問效率和提供更佳的受訪者體驗。該系統與住戶所使用的網上問卷系統相似，均可即時檢測出需要住戶核實的數據及設有編碼搜尋功能。

4.13 經由電話訪問填交問卷的住戶接近 23 萬個，佔全港經點算住戶的 10%。此外，人口普查服務中心處理了逾 10 萬個市民查詢電話，內容包括郵寄問卷狀況、問卷內容、2021 年人口普查的背景資料等。

(c) Telephone interview

4.12 Households could call the Census Service Centres for enquiries on the 2021 Population Census and completing the OQ, checking the identity of the census officers as well as making appointments for face-to-face interviews. They could also call the Census Service Centres for a telephone interview. Census officers of the Census Service Centres used the telephone enquiry system and the telephone interview system to record the information collected from households. The telephone interview system was newly developed in the 2021 Population Census to enhance enumeration efficiency and provide better respondent experience. This system, similar to OQ system used by the households, could carry out on-the-spot data validation checks to detect data that required verification by the households and provided a code-searching function.

4.13 Nearly 230 000 households submitted their questionnaires via telephone interviews, accounting for 10% of all enumerated households. The Census Service Centres also handled over 100 000 enquiry calls, which were on postal questionnaire status, questionnaire content, background information of the 2021 Population Census, etc.

(d) 面談訪問

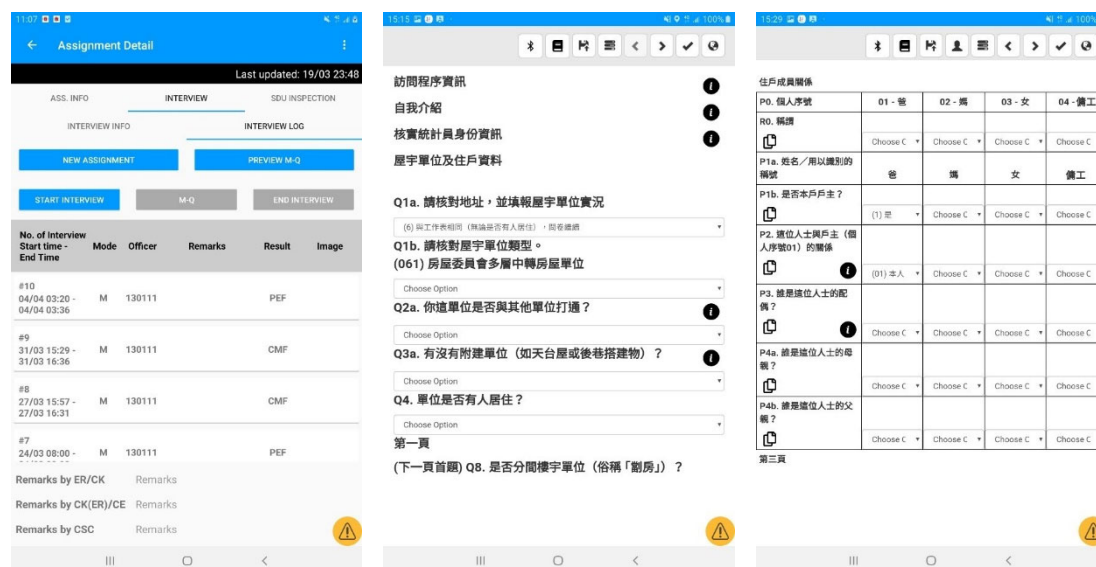

4.14 本處安排統計員於 2021 年 7 月 18 日至 8 月 4 日期間，到訪未填交問卷的住戶進行面談訪問，並以平板電腦搜集所需資料。統計員根據平板電腦上的工作分配表到訪屋宇單位，訪問單位內所有住戶的成員。

4.15 2021 年人口普查採用先進資訊科技，以電腦輔助面訪方法進行訪問。跟 2016 年中期人口統計一樣，電腦輔助面訪的模式是由統計員利用平板電腦的流動問卷代替紙本問卷，記錄所搜集得的數據。除了更環保外，此方法還可為外勤運作提供更具效率及流暢的支援，例如便利的版面設計有助統計員向住戶搜集資料。而且，統計員可即時透過資料審核程序來檢測出需要受訪者核實及補充資料的數據，從而提升數據質素。此外，平板電腦亦設有編碼搜尋功能，令編碼工作更加快捷及準確。

(d) Face-to-face interview

4.14 The department arranged census officers to visit households that had not yet submitted questionnaires to conduct face-to-face interviews during 18 July to 4 August 2021, and use mobile tablets to collect the required information. Census officers visited the quarters according to the assignment lists on their mobile tablets, and enumerated persons living in all the households therein.

4.15 A Computer-Assisted Personal Interviewing (CAPI) method using advanced information technology was adopted in the 2021 Population Census. As in the 2016 Population By-census, under the CAPI approach, census officers made use of mobile tablets to record the collected data on the mobile questionnaires (m-Q) instead of paper questionnaires. In addition to being more environmentally friendly, this approach could offer more efficient and seamless support to fieldwork operation. For example, a user-friendly application interface facilitated census officers' collection of information from households. Besides, the quality of data collected was enhanced as census officers could conduct on-the-spot data validation checks, which enabled more timely verification and clarification with the respondents. Furthermore, code-searching function was available in the mobile tablets and this facilitated faster and more accurate coding work.

4.16 因應 2019 冠狀病毒病的疫情，本屆人口普查的外勤工作採取了以下措施，以減少社交接觸及減低病毒傳播風險：

預防措施

- (i) 鼓勵統計員接種疫苗，並定期向所有需進行外勤工作但未曾接種疫苗的統計員作強制病毒檢測；
- (ii) 各外勤工作站提供電子探熱器、口罩、消毒紙巾、酒精搓手液、手套等用品供工作人員使用；及
- (iii) 統計員須遵守本處發出的抗疫指引，保持良好的個人衛生；

外勤措施

- (iv) 派遞載有統計員平板電腦電話號碼的呼籲信到尚未填交問卷

4.16 In view of the evolving situation of the COVID-19 pandemic, the following measures were implemented during the fieldwork of the 2021 Population Census to reduce social contact and the risk of virus transmission:

Precautionary measures

- (i) encouraging census officers to receive vaccination, and arranging regular compulsory COVID-19 testing for all census officers who had to conduct fieldwork but were not yet vaccinated;
- (ii) providing electronic thermometers, face masks, alcohol swabs, hand sanitisers, gloves, etc. for staff members in all field centres; and
- (iii) requesting census officers to follow the anti-epidemic guidelines issued by the department and maintain good personal hygiene;

Fieldwork measures

- (iv) delivering appeal letters with the telephone numbers of the census officers' mobile tablets

的住戶信箱，方便住戶聯絡統計員進行電話訪問；及

- (v) 要求統計員盡量嘗試透過大廈的對講機系統簡短游說住戶合作，及詢問住戶的電話號碼以進行電話訪問。

4.17 在進行資料搜集工作時，所有統計員須多次拜訪住戶，直至完成訪問全部住戶成員。根據指引，統計員須於不同日期和不同時間探訪同一個住戶，以增加成功接觸住戶的機會。另外，統計員每次拜訪時，如未能接觸住戶，均須留下「到訪不遇」便條，要求住戶盡快自行填交電子問卷或紙本問卷（適用於接受簡單點算的住戶）、致電人口普查服務中心進行電話訪問，或在網上或致電服務中心預約訪問。

4.18 透過上述跟進措施，約 8 成半住戶在點算工作完結時已被點算。有關 2021 年人口普查的詳細點算結果載於下圖。

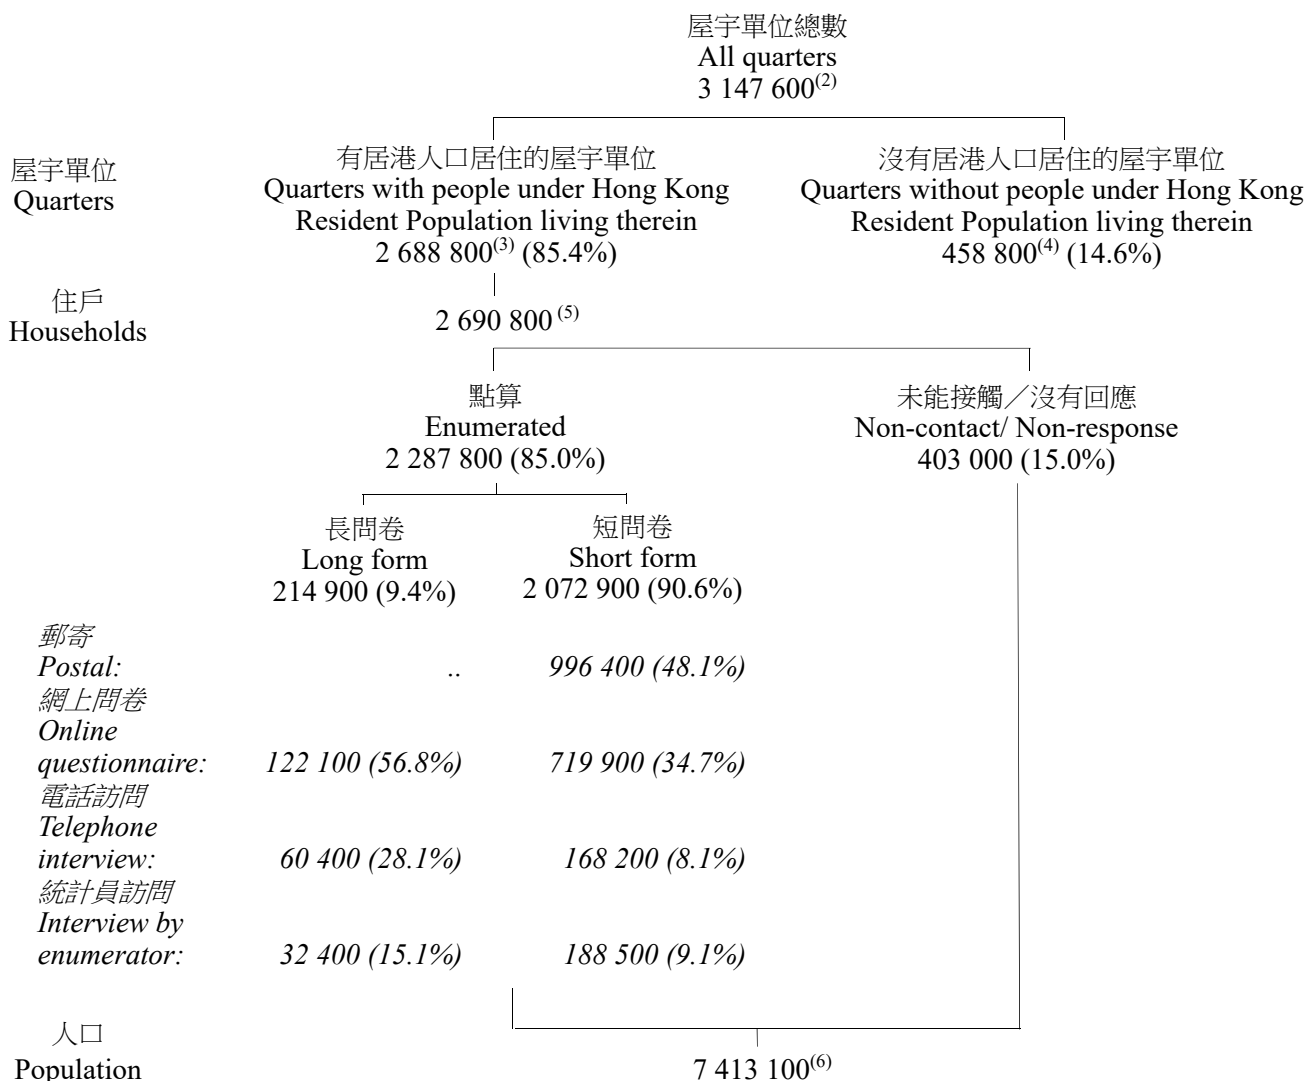

to the mailboxes of households that had not yet submitted questionnaires, so that they could contact the census officers for telephone interview; and

- (v) requesting census officers to solicit the cooperation of households using the intercom system of buildings, and ask for the telephone numbers of households for conducting telephone interview.

4.17 All census officers had to make repeated visits to each household until all members of the household had been interviewed. They were instructed to visit a household at different times of a day and on different days so as to increase the chance of successfully contacting the household. Besides, for each visit in which a household could not be contacted, the census officer had to leave a “Non-contact” slip requesting the household to complete the OQ or paper questionnaire (for households subject to simple enumeration), call the Census Service Centres for a telephone interview, or make an interview appointment online or by calling the Census Service Centres at their earliest convenience.

4.18 With the above follow-up measures, the majority of households (85%) were enumerated at the end of the operation. Detailed enumeration results of the 2021 Population Census are shown in the diagram below.

水上人口點算

4.19 就居住在漁船的住戶，本處根據從空中拍攝在本港水域內所有船隻停泊處的照片估算其數目，並透過漁農自然護理署提供的資料估算其特徵。至於居住在遊艇的住戶，則是向被抽選的住戶寄發一份通知信邀請他們填交網上問卷、寄回已填妥的紙本問卷（適用於接受簡單點算的住戶）或致電人口普查服務中心接受電話訪問提供所需數據。

特定組別人士的點算

4.20 本處就點算一些居住在有出入限制或困難的地方的「特定組別人士」作出特別安排，以便利有關工作。下面列出這些「特定組別人士」及其點算方法：

Marine enumeration

4.19 For households residing on fishing boats, their number was estimated based on aerial photos of all anchorages in Hong Kong Waters and their characteristics were estimated based on information provided by the Agriculture, Fisheries and Conservation Department. As for households residing on pleasure craft, a notification letter was sent to the sampled households to invite them to provide the requested data by completing the OQ themselves, mailing back the completed paper questionnaire (applicable to households subject to simple enumeration) or calling the Census Service Centres for telephone interview.

Special class enumeration

4.20 For operational convenience, special arrangements were made to enumerate some special groups of persons (called the special classes) who stayed in places with restriction or difficulty of access. These “special classes” and their respective enumeration methods are shown below:

數據輸入及處理

4.21 2021 年人口普查的外勤工作完成後，共收回 2 417 000 份「短問卷」及 287 700 份「長問卷」，包括由住戶完成的網上問卷和紙本問卷，以及由統計員透過面談訪問和電話訪問完成的問卷。由於點算水上人口及特定組別人士所牽涉的數據處理程序較為複雜，為簡單起見，下圖只描繪用以記錄點算陸上人口數據的問卷處理程序：

Data input and processing

4.21 Upon completion of enumeration of the 2021 Population Census, 2 417 000 sets of “Short Form” questionnaires and 287 700 sets of “Long Form” questionnaires, including OQs and paper questionnaire completed by households and questionnaires completed by census officers through face-to-face and telephone interviews, were collected. Since the processing flow for data collected in the marine and special class enumeration was more complex, for simplicity, only the processing flow for data recorded on the questionnaires for land enumeration is illustrated in the diagram below:

- 紙本問卷上的資料通過「智能字元識別」及「光學標記識別」技術直接輸入電腦。透過網上問卷、電話訪問及流動問卷所收集的數據直接傳送到有關的系統，因此無須進行數據輸入。

Information on the paper questionnaires was input into the computer directly using “Intelligent Character Recognition (ICR)” and “Optical Mark Recognition (OMR)” techniques. Data capturing was not required for the data collected via OQs, telephone interviews and m-Qs as the data were directly transmitted to relevant computer systems.

- 系統把大部分網上問卷、流動問卷及電話訪問所收集的數據自動編碼，而個別未被編碼的數據項目，則由約 100 名編校員透過電腦系統，根據住戶或統計員輸入的字串進行編碼。

部分紙本問卷上的手寫答案，經資料輸入時掃描取得的電子影像，編校員可於電腦屏幕上直接進行編碼。

Most of the data items had been automatically coded in OQs, m-Qs and during telephone interviews. For some other non-coded data items, coding was performed by some 100 editors directly on a computer system based on the text strings inputted by households or enumerators.

For some hand-written answers on the paper questionnaire, coding was performed directly on screen by editors based on the clipped images of the long hand answers obtained through data capturing.

- 完成網上問卷、電話訪問及流動問卷前，系統會就所填報的數據即時根據一套簡化的審核準則進行初步的審核。問卷遞交後（包括紙本問卷），系統會按照一套完整的審核準則審核問卷上的數據，以確保數據的合理性。編校員透過「數據處理及檢查子系統」對未能通過審核程序的數據進行編校工作。

Before completing OQs, telephone interviews or m-Qs, the data entered were initially checked based on a simplified set of validation rules. After submission of questionnaires (including the paper questionnaires), a complete validation and editing process was conducted to validate the data entered on the questionnaires so as to ensure data consistency. Data rejected by validation rules in the “Data Processing and Checking Sub-system” were edited by editors.

- 漏報資料及不同數據項目間的矛盾數值會由設算電腦系統所算出的估算值取代。

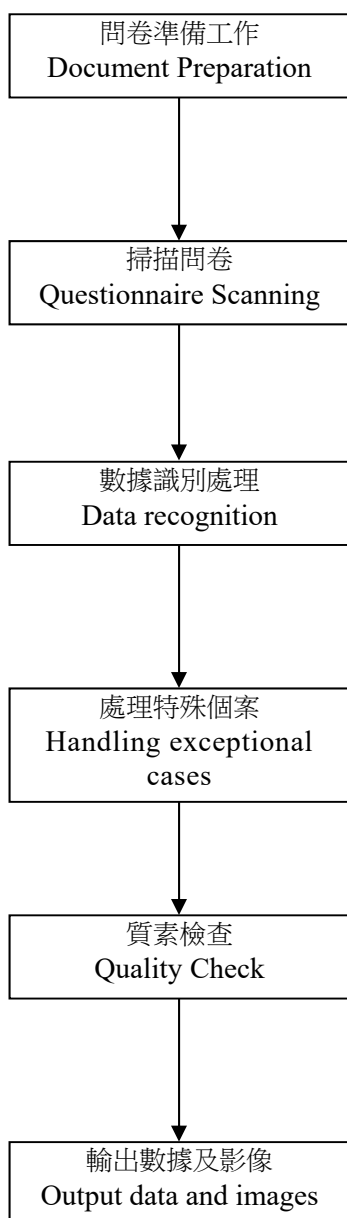

Non-responded data and inconsistent values among different data items were replaced by imputed values generated from the imputation computer system.

- 2021年人口普查的製表工作是透過統計分析及製表軟件程式進行。

Tabulations on the 2021 Population Census data were produced using statistical analysis and tabulation software programs.

數據輸入

4.22 「智能字元識別」及「光學標記識別」技術應用於掃描所有紙本問卷，然後將填在問卷上的「數目字」及「標記」轉化成電腦可讀的數據。下圖展示整個數據輸入的程序：

Data capturing

4.22 The “Intelligent Character Recognition (ICR)” and “Optical Mark Recognition (OMR)” techniques were employed to scan all paper questionnaires and automatically convert the “numbers” and “marks” recorded on the questionnaires into computer readable data. The diagram below presents the whole data capturing process:

- 檢查問卷是否適合進行掃描
Checking the condition of questionnaires before scanning
- 利用高速掃描器掃描問卷
Scanning questionnaires by high speed scanners
- 利用「智能字元識別」及「光學標記識別」技術將掃描影像轉化為電腦可讀數據
Converting scanned images into computer readable data using ICR/ OMR techniques
- 人手輸入未能為「智能字元識別」及「光學標記識別」辨認的影像
Manual data entry of unrecognised “ICR/ OMR” images
- 抽查一個 2% 樣本檢查數據是否準確
Selecting a 2% sample to check the data accuracy
- 輸出數據及影像進行電腦輔助編碼、審核及分析
Outputting data and images for computer-assisted coding, validation and analysis

4.23 為方便收到紙本問卷的住戶以郵寄問卷提供資料，2021 年人口普查採用 A3 紙大小的紙本問卷，讓住戶易於閱覽問卷內容及自行填寫問卷。A3 大小的郵寄問卷會摺成 A5 大小以便郵寄。儘管交回的郵寄問卷經過摺疊及郵寄過程，但絕大部分的問卷都適合以掃描輸入資料，而掃描過程亦相當順利。

4.24 由於有先進的掃描及數據識別技術，負責數據輸入工作的承辦商動用了 10 台高速掃描器及 130 部電腦便能於兩個月內完成數據輸入工作。每個工作天的工作時間為早上 9 時至晚上 10 時。高峰期平均每天處理超過 100 000 份紙本問卷。

4.23 To facilitate households receiving paper questionnaire in using the postal questionnaire, an A3-sized paper questionnaire was adopted in the 2021 Population Census so as to make it easier to read and complete. The A3-sized postal questionnaires were folded into an A5-sized format for mailing. Although the postal questionnaires received had been folded and handled by mail delivery, almost all of them were suitable for data scanning. The overall scanning process was smooth.

4.24 With the advancement of scanning and data recognition technologies, 10 high speed scanners together with 130 computers were deployed by the data capturing contractor to complete the data capturing work within two months' time. The production hours ran from 9:00 a.m. to 10:00 p.m. each working day. On average over 100 000 paper questionnaires were processed on peak days.

電腦輔助編碼

4.25 問卷上由住戶或統計員輸入的字串（包括行業、職業、5 年前居住的地方、上課地點及工作地點），編校員可於電腦系統上透過有關資料及編碼電子資料庫，直接進行編碼，而無須翻查有關的編碼手冊。下圖顯示有關行業及職業的電腦輔助編碼過程。

Computer-assisted coding

4.25 For text strings inputted by households or census officers (including industry, occupation, place of residence 5 years ago, place of study and place of work) on the questionnaires, coding was performed by editors on a computer system directly making use of the corresponding information and the electronic data dictionary instead of flipping through the related coding manuals. The diagram below demonstrates how the coding for industry and occupation was performed through computer-assisted coding.

數據審核及編校

4.26 經過電腦輔助編碼後，編校員透過「數據處理及檢查子系統」進行編校工作。這子系統包含超過 100 條審核準則，以查驗不同數據項目的數值是否存在錯誤及／或不合邏輯的地方。例如當遇到 12 歲女子報稱已婚及有一名 3 歲女兒，編校員會翻查問卷，檢視年歲資料，以確定是否需作出更正。

Data validation and editing

4.26 After performing the computer-assisted coding, editing work was performed by editors using the “Data Processing and Checking Sub-system”. This sub-system contained over 100 rules for identifying errors and/ or inconsistencies among the values of different data items. For example, if there was a 12-year old female reported to be married and had a 3-year-old daughter, the editor would go through the questionnaire and check the age information to see whether amendment was required.

編校員正進行編校工作

設算

4.27 設算階段首先須偵測漏報資料和分辨相關數據項目的數值間的矛盾情形，而這些漏報／矛盾資料不能利用人手更正，然後再由電腦自動根據預設的審核準則及設算機制，為這些漏報／矛盾數值配上系統估算值。

Imputation

4.27 The imputation stage first involved detecting non-responded data (i.e. missing data) and identifying inconsistencies among the values of related data items which could not be corrected manually. These missing/ inconsistent values would then be replaced automatically by imputed values generated by the computer in accordance with the prescribed validation rules and imputation mechanism.

製表

4.28 2021 年人口普查的製表工作是透過統計分析及製表軟件程式進行。統計表是按照出版時間表、使用者需要及有關統計表的複雜性分期製作。這些統計表已分階段上載在 2021 年人口普查主題網站供使用者下載。此外，本處亦開發了一個特別為製作「網上互動數據發布服務」統計表的製表系統。「網上互動數據發布服務」提供一個方便易用的介面，讓使用者可以按照個人需要自行製作統計表或統計圖。

Tabulation

4.28 Tabulations of the 2021 Population Census data were produced using statistical analysis and tabulation software programs. The tabulations were produced at different stages following a schedule which was worked out with reference to the publication timetable, need of users and complexity of the tables involved. These tabulations have been put on the thematic website for the 2021 Population Census in phases for download by users. Besides, a system specially designed for generating statistical tables in the “Interactive Data Dissemination Service” (IDDS) was also developed. 5. 抽樣設計及估計方法

5.1 本處在 2021 年人口普查使用抽樣方法以搜集香港人口有關人口及社會經濟特徵的資料。全港約九成住戶接受簡單的點算，只須提供住戶成員的基本人口特徵資料；其餘約一成住戶接受詳細的訪問。因此，2021 年人口普查採用了兩份問卷，即「長問卷」及「短問卷」。除 1961 年及 1971 年人口普查外，本處亦在 1981 年、1991 年、2001 年及 2011 年的人口普查，以及 1966 年、1976 年、1986 年、1996 年、2006 及 2016 年的中期人口統計，採用抽樣方法，搜集人口的詳細資料。

抽樣單位

5.2 個人是訪問的基本單位。不過，在抽取樣本時，已建設地區及特定組別是以屋宇單位作為抽樣單位，未建設地區則以「小區」作為抽樣單位。有關 2021 年人口普查的抽樣框詳情，請參閱第 2 章。

樣本設計

5.3 在擬定抽樣設計時，成本、精確度、運作需求及實際可行性均予以適當考慮。詳細訪問的樣本大小是以點算成本及所需的準確程度來決定。理論上，樣本愈大，抽樣誤差愈小，但成本則愈高。分析 2011 年人口普查及 2016 年中期人口統計的結果，可顯示不同大小樣本相對的準確程度。

5. Sample Design and Estimation

5.1 In the 2021 Population Census, sampling was used for conducting a detailed enquiry on a broad range of demographic, social and economic characteristics of the Hong Kong population. About nine-tenths of the households were subject to simple enumeration to provide basic demographic information of their household members, while the remaining one-tenth of the households were subject to more detailed enquiry. Therefore, two sets of questionnaires, namely the “Long Form” questionnaire and the “Short Form” questionnaire, were used. Except for the 1961 and 1971 Population Censuses, sampling was also adopted in the 1981, 1991, 2001, and 2011 Population Censuses, and the 1966, 1976, 1986, 1996, 2006 and 2016 Population By-censuses for collecting detailed information of the population.

Sampling unit

5.2 A person was the fundamental unit of enquiry. However, for sample selection, the sampling unit was a unit of quarters for built-up areas and special classes; and an “Area Segment” for non-built-up areas. For more details on the sampling frames of the 2021 Population Census, please refer to Chapter 2.

Sample design

5.3 In determining the sample design, due consideration was given to cost, precision, operational implications and practical feasibility. The size of the sample for detailed enquiry depended on the cost of enumeration and the level of precision required. Theoretically, the larger the sample, the smaller the sampling error would be but the higher the cost. Analysis of the results of the 2011 Population Census and the 2016 Population By-census gave an indication of precision levels pertaining to different sample sizes.

5.4 為使較細小地區的統計數字更為精確，樣本設計採用了非劃一的抽樣比率。本處從抽樣框抽選了一個非比例分層等距樣本（disproportionate stratified systematic sample）。在維持整體抽樣比例在約十分之一的同時，亦會考慮地區的特徵，較細小的分層一般採用較大的抽樣比率。陸上人口方面，分層方法依據兩項因素來劃分。第一項分層有三個部分：已建設地區、未建設地區和特定組別。第二項分層則為區議會選區。已建設地區會按屋宇單位類型進一步分層，亦會考慮地區內分間樓宇單位的普遍性作更精細的分層。在特定的樣本規模下，分層抽樣方法有助提高統計估算的準確程度，並可提供按區議會選區劃分的充分準確估計數字，以方便地區管理及規劃。

5.5 在已建設地區內，各個區議會選區的抽樣比率由十六分之一至五分之一不等。

5.6 至於未建設地區，則以小區作為抽樣單位，而各個區議會選區的抽樣比率則由十六分之一至全面點算不等。

5.7 對於特定組別，本處一般採用全面點算，以簡化工作程序。然而，就長期居住於酒店或賓館的住客，則採用系統抽樣方法抽選五分之一的樣本進行詳細統計。

5.8 水上人口的點算涵蓋漁船及遊艇。漁船方面，本處根據從空中拍攝在本港水域內所有船隻停泊處的照片和漁農自然護理署提供的資料估算其人口數目和特徵。至於遊艇，則以約五分之一的抽樣比率選出船艇進行詳細統計。

5.4 In order to obtain more precise estimates of smaller-area statistics, a sample design involving non-uniform sampling fractions was adopted. A disproportionate stratified systematic sample was drawn. While maintaining an overall sampling fraction of around one-in-ten, in general, higher sampling fractions were adopted in smaller strata with due consideration to the characteristics of the areas. For land population, stratification was performed based on two factors. The first stratification factor had three strata – built-up areas, non-built-up areas and special classes. The second stratification factor referred to the District Council Constituency Area (DCCA). Built-up areas were further stratified by type of quarters with due consideration also given to the prevalence of subdivided units in some areas for finer stratification. For a specific sample size, the stratification helped improve the precision of the sample estimates and provided sufficiently precise estimates at the DCCA level for district administration and planning.

5.5 For the built-up areas, sampling fractions ranging from one-in-sixteen to one-in-five were adopted for different DCCAs.

5.6 As for non-built-up areas, area segment was used as the sampling unit. Sampling fractions for different DCCAs ranged from one-in-sixteen to full enumeration.

5.7 For the special classes, full enumeration was generally adopted in order to simplify the operation. However, in the case of long-staying guests in hotels or guesthouses, a one-in-five systematic sample was drawn for detailed enumeration.

5.8 Enumeration of the marine population covered fishing boats and pleasure craft. For fishing boats, the number and characteristics of the population were estimated based on aerial photos of all anchorages in Hong Kong Waters and information provided by the Agriculture, Fisheries and Conservation Department. As for pleasure craft, a sampling fraction of about one-in-five was applied for selecting pleasure craft for detailed enumeration.

估計程序

5.9 估算階段包括以下兩個程序：

未能接觸個案的處理方法

5.10 根據有關法例，所有指定人士均須回答人口普查問題。遺漏資料與未能接觸個案有關。一般而言，若統計員在人口普查期間於不同日子、時間探訪某住戶超過四次，仍未能接觸該住戶，該住戶才會被列為未能接觸個案。空置屋宇單位不當作未能接觸個案。在 2021 年人口普查中，未能接觸個案佔住戶數目的 14.8%。

5.11 未能接觸住戶的特徵會根據他們不同的設算值（*imputation score*）而作出設算。設算值為一個概率函數，用以量度某一特定住戶在人口普查中成功被點算的或然率，是根據每個成功被點算的住戶的特徵計算。設算值愈低表示該住戶成功被點算的機會愈低，換言之，愈與未能接觸住戶的特徵相似。

5.12 與未能接觸住戶相關的設算程序如下：首先以一些選定特徵（如地區）將已被點算住戶分為不同的設算群組（*imputation pool*），然後按其設算值排列。未能接觸住戶的基本特徵會根據其所屬設算群組中最低設算值的已被點算住戶的特徵設算得出。在每次設算後，所挑選的已被點算住戶的設算值會被加上一懲罰值（*penalty score*），重覆使用同一已被點算住戶作設算的機會從而減少。然後，該設算群組中所有已被點算住戶會重新排列。整個過程重覆直至所有未能接觸住戶均被設算。

Estimation procedures

5.9 The estimation stage included two procedures as follows:

Treatment of non-contact cases

5.10 By law, every specified person had to respond to the Census questions. Missing information was related to non-contact cases. In general, a household was classified as a non-contact case only if an enumerator had visited it for more than four times at different times on different days during the Census period. Vacant quarters were not classified as non-contact cases. The non-contact rate was 14.8% of households covered in the 2021 Population Census.

5.11 Characteristics of non-contact households were imputed according to their different imputation scores. The imputation score, in the form of a probability function, measures the likelihood a particular household would be successfully enumerated in the Census and was computed for each enumerated household based on the reported characteristics of the household. The lower the score, the less likely the household would be successfully enumerated and the more likely it would mirror the characteristics of the non-contact households.

5.12 The imputation procedures relevant to non-contact households are as follows. First, different imputation pools were formed by stratifying the enumerated households according to some selected characteristics (e.g. geographical areas). Enumerated households in each imputation pool were then sorted by their imputation scores. The basic characteristics of the enumerated household with the lowest score were first used to impute those of a non-contact household in the same imputation pool. After each imputation, a penalty score was added to the imputation score of the chosen enumerated household so that the chance of repeatedly using the same enumerated household for imputation was smaller. All the enumerated households in that particular pool were then re-ordered.

5.13 除了未能接觸的住戶外，未能點算的流動居民亦會被設算。鑑於流動居民大部分時間在香港以外地方，可能有些流動居民在 43 天的人口普查期間（即 2021 年 6 月 23 日至 8 月 4 日）均不在港。不過，部分的流動居民可在住戶中點算並搜集得到其詳細資料。其他不屬於任何已被點算的住戶，而在人口普查期內又不在香港的流動居民，他／她們的數目及特徵可透過行政記錄和已點算的流動居民的資料引申得到。基於精確度的考慮，本處並沒就個別樓宇的分項數字進行有關設算的工作。

根據抽樣調查的估算方法

5.14 2021 年人口普查採用「廣義迴歸估算方法」（Generalised Regression Estimation Method）估計人口及住戶的詳細特徵資料。「廣義迴歸估算方法」旨在找出一組校準後的倍大因子盡可能接近原本的倍大因子，而同時間，用校準後的倍大因子編製的選定輔助變數的估算數字與其控制總數相約。在估算中，原本的倍大因子是用「比率估算方法」（Ratio Estimation Method）引申得出，而一些基本特徵，如年齡、性別和屋宇單位類別則用作輔助變數。另外，為達到更佳的精確度，整個估算工作在不同的地區層面進行。

5.15 為了確保數據的保密性和避免個別人士或住戶的資料被識別，倍大因子均隨機加入小量的白雜訊（white noise）。然而，本處已採取合適的措施確保編製的表格的資訊價值盡可能不受影響。上述方法經參考 2016 年中期人口

The whole process would iterate until all non-contact households had been imputed.

5.13 Besides non-contact households, non-enumerated Mobile Residents had also been imputed. Given that Mobile Residents spent majority of their time outside Hong Kong, some of them might not be in Hong Kong during the entire 43-day Census period (i.e. 23 June to 4 August 2021). However, some Mobile Residents could be found in households with detailed characteristics collected during the Census. For other Mobile Residents who did not belong to any enumerated households and were not in Hong Kong throughout the Census period, their number and characteristics had been derived using administrative records and data collected from those Mobile Residents enumerated. Due to precision consideration, such imputation had not been performed in respect of breakdowns for individual buildings.

Estimation based on sample enquiry

5.14 The “Generalised Regression Estimation Method” was adopted in the 2021 Population Census to estimate detailed characteristics of the population and households. It aims to find a set of calibrated grossing-up factors which are as close to the initial grossing-up factors as possible and at the same time, the grossed-up figures for selected auxiliary variables compiled based on the calibrated grossing-up factors reconcile to the known control total of the variables concerned. In the estimation, the initial grossing-up factors were derived using the “Ratio Estimation Method” and some basic characteristics, such as age, sex and type of quarters, were chosen as the auxiliary variables. Furthermore, to achieve better precision level, the estimation was performed at different geographical levels.

5.15 In order to protect data confidentiality and avoid the identification of an individual person or household, the data were protected by randomly introducing a small amount of white noise to the grossing-up factors. Nevertheless, appropriate measures were implemented to ensure that the

information value of a compiled table as a whole was not impaired as far as possible. The above method was derived by making reference to practices adopted in the 2016 Population By-census and in other statistically advanced economics as well.

標準誤差的估算方法

Estimation of standard errors

5.16 2021年人口普查採用「大折刀連續重疊抽樣法」(Jackknife Repeated Replications Method)估算標準誤差。首先以區議會選區和屋宇單位類型將住戶分為 n 個分層，然後再將每個分層的住戶隨機地分成兩個子樣本。從每個分層中抽選一子樣本的資料不作選用，然後再將該分層的另一子樣本的資料重複使用，組成一套共有 $2n$ 個的仿樣本。

5.16 The “Jackknife Repeated Replications Method” was used to estimate the standard error in the 2021 Population Census. A total of n strata were formed by stratifying households according to the District Council Constituency Area and type of quarters. Records in each stratum were further randomly divided into two replicates. A set of $2n$ pseudo replicates were formed by dropping out one replicate from each stratum in turn, and duplicating the stratum’s other replicate.

5.17 假設 e 為總樣本中變數 E 的估值，同時設 e_t 為由第 t 個仿樣本得出的估值。 e 的方差可用以下的公式計算：

5.17 Let e be the estimate of a variable E compiled from the total sample. Then let e_t denote the estimate compiled from the t^{th} pseudo replicate. The variance for an estimate, e , can be computed using the formula below:

$$\text{var}(e) = \frac{1}{2} \sum_{t=1}^{2n} (e_t - e)^2$$

6. 資料質素及評估

數據的品質控制

6.1 2021年人口普查是一項大型而複雜的工作。本處設立了一套完整的核查系統，以控制在人口點算中所得資料的質素。當中包括以下幾個環節：

- (i) 當住戶透過網上問卷或統計員透過電話訪問系統／平板電腦輸入資料時，系統會即時對填報的資料作初步檢核，以查驗填報資料的一致性及合理性。這有助及早發現問題，並即時與住戶作出數據審核，從而有效提升數據質素。所有已提交的問卷，包括住戶自行填報的網上／紙本問卷及統計員透過電話訪問系統／平板電腦完成的問卷，亦會再作進一步的詳細數據檢核。
- (ii) 組長須在工作初段期間陪同統計員進行訪問及觀察其工作情況，並在有需要時給予補充訓練。其後，組長會對表現未如理想的統計員加以留意，並詳盡檢查其工作。
- (iii) 外勤訪問工作小組的組長須詳細檢查及批核所有統計員提交的問卷，以確保所有問卷已填妥和數據編碼正確無誤，可作進一步處理和檢測。如發現問卷有錯漏，組長會退回有關問

6. Quality of Data and Evaluation

Quality control of data

6.1 The 2021 Population Census is a large scale and complex operation. A comprehensive checking system was designed to control the quality of the data collected in the enumeration. It covered the following aspects:

- (i) When households reported the required data through OQs or enumerators recorded the data through the Telephone Interview System/ mobile tablets, preliminary checking on information was carried out to verify the consistency and reasonableness of the data. This would facilitate early identification of problems and enabled instant data verification with households, thus enhancing the quality of data. All submitted questionnaires, including those completed by self-enumeration through the OQs/ paper questionnaires, and those completed by enumerators using the Telephone Interview System/ mobile tablets, would be further validated.
- (ii) Chief enumerators had to accompany the enumerators in field visits and observe their work at the beginning of the operation and give them remedial training whenever necessary. Subsequently, enumerators with less satisfactory performance were given more attention and their work was inspected in greater detail by chief enumerators.
- (iii) Chief enumerators of the Enumeration Divisions had to scrutinise and approve all the questionnaires submitted by enumerators to ensure that they were properly completed and that the data were correctly coded and ready for further data processing and

卷予統計員作跟進。

- (iv) 所有由住戶及統計員填交的問卷，均會透過完整的數據審核程序，將有懷疑錯漏的記錄辨別出來。大部分被辨別出來的資料記錄隨後可經編校及設算適當處理，其餘的會交予人口普查服務中心或覆核小組的覆核員以電話或外勤的方式作出跟進。
- (v) 人口普查服務中心和覆核小組的覆核員亦須再次致電或造訪經隨機抽選已提供資料的住戶，以覆核問卷上的重要資料。
- (vi) 就統計員報稱是空置、已拆卸、建築中或無人居住的屋宇單位，亦會隨機抽選給覆核小組的覆核員進行外勤驗證，以確定所報稱的情況。

6.2 此外，人口普查亦採用了一系列措施以減少誤差。這包括預備一個完善及最新的抽樣框、給予臨時外勤工作人員透徹及全面的訓練、全面審核已完成的問卷、適當地處理未能接觸個案，以及將編碼、審核及編校等工作電腦化。

6.3 本處雖然已盡力確保資料搜集、審核和處理過程完善，以及所得出的結果準確，但人口普查資料仍有機會存在些微誤差。因此，評估統計資料質素和了解誤差的來源及大小是必須的，以便向資料使用者提供數據可信賴程度的參考資料。

validation. If errors were found in the questionnaires, they would return the questionnaires concerned to enumerators for follow-up.

- (iv) More comprehensive data validation was implemented to identify dubious records from questionnaires submitted by households and enumerators. While most of the cases could be suitably handled through data editing and imputation subsequently, the remaining were passed to the Census Service Centres or checkers of the Checker Divisions for verification by telephone or revisits.
- (v) The Census Service Centres and checkers of the Checker Divisions were also required to call or revisit a random sample of the households that had provided data to verify the key information recorded on the completed questionnaires.
- (vi) Quarters reported by enumerators as vacant, demolished, construction-in-progress or unoccupied were randomly selected for checkers of the Checker Divisions to verify the reported status through field visits.

6.2 Besides, a number of measures were adopted in the Census to help reduce errors. These included the preparation of a complete and up-to-date sampling frame, thorough and comprehensive training of temporary field workers, comprehensive checking of completed questionnaires, proper treatment of non-contact cases and computerised data coding, validation and editing.

6.3 Although every effort was made to ensure that the collection, validation and processing of data were complete and the final results were accurate, there remained a chance that some errors, however small, might still be found in the Census data. Hence, it was essential to evaluate the data quality and recognise the source and magnitude of such errors. This can

provide data users with some indication of the level of confidence with which the data can be used.

誤差的來源和分類

6.4 人口普查資料的「誤差」包括抽樣誤差和非抽樣誤差。在抽樣統計調查中，統計數字是由抽選的樣本得來的，而抽樣誤差必定存在於每一個抽樣統計調查中。抽樣誤差是指若用同一方法重覆地抽出樣本，從不同樣本取得的估計值之間的差異，是在抽樣過程中可辨認及控制的差異元素。抽樣誤差取決於樣本大小及抽樣方法。一般來說，對某一指定的抽樣方法而言，樣本較大，抽樣誤差則較小。在人口普查中，所有有關人口、住戶及屋宇單位的詳細特徵的估計值均存在抽樣誤差，但是人口普查所選擇的抽樣設計、樣本大小及抽樣方法確保了大多數變數的樣本估計值，在實際應用時有足夠的精確度。

6.5 非抽樣誤差與抽樣變異性無關。不完全的地理記錄及地圖、點算時不小心遺漏了住戶或人口、問卷設計的問題、工作指引手冊不清楚、未能得到住戶合作提供準確資料，以及搜集所得的資料記錄及編碼不準確，均為人口普查中可能出現的非抽樣誤差來源。非抽樣誤差可影響人口、住戶及屋宇單位的總數，亦可影響個別特徵的分類數字，以致統計結果出現偏差。

抽樣誤差

6.6 2021年人口普查所選的樣本，是從同一總體中用同樣抽樣方法，可能抽出相同大小的所有樣本的其中之一。從不同樣本所衍生的樣本估計值會彼此不同。抽樣誤差以「標準誤差」來量

Sources and classification of error

6.4 “Errors” found in the Census data consist of sampling errors and non-sampling errors. Sampling errors are inherent in every sample survey where statistics are obtained from a sample. They refer to the variation of a sample estimate if samples are drawn repeatedly using the same method. They are the recognisable and controllable elements of variability in the sampling process. Sampling errors depend on the sample size and sampling method. In general, for a given sampling method, a larger sample produces estimates with smaller sampling errors. In the Census, all estimates of the detailed characteristics of the population, households and quarters are subject to sampling errors. However, the choices of sample design, sample size and sampling method made for the Census ensure that the sample estimates for most variables would be sufficiently precise for most practical purposes.

6.5 Non-sampling errors are not related to sampling variability. Incomplete geographical records and maps, careless omission of households or persons in the enumeration, problems in the questionnaire design, obscurity in the instruction manuals, failure to gain full co-operation of households in providing accurate answers, as well as inaccurate recording and coding of information collected were possible sources of non-sampling errors in the Census. Non-sampling errors could affect the total count of the population, households and quarters. They could also affect the breakdown figures of individual characteristics and cause bias in the results.

Sampling errors

6.6 The particular sample selected for the 2021 Population Census was one of all the possible samples of that size which could be selected from the same population using the same sampling method. Estimates derived from different samples would differ

度，標準誤差是個別樣本估計值與所有樣本的平均估計值之差經二次方之後的平均數，反映該估計的精確度。一個變數的標準誤差的大小，與樣本大小、抽樣方法，以及有關特徵的內在差異有關。2021年人口普查的抽樣設計及估計標準誤差的公式載於第5章。

6.7 一個抽樣估計值的精確度，亦可從其「置信區間」反映。舉例來說，某一抽樣估計值的95%置信區間，其上下限分別在樣本估計值之上及之下相距約「兩個標準誤差」，將有95%的概率包括了整體的參數。換言之，若以同樣方法抽取100個同樣大小的樣本，每個樣本計算其置信區間，可預期當中有95個置信區間將包括了整體的參數。

6.8 表6.1及6.2列出一些選定的變數的樣本估計數字、估計標準誤差及95%置信區間。這些數字顯示在2021年人口普查中一系列不同詳細程度的變數的精確程度。

非抽樣誤差

6.9 雖然引入了各類預防措施，非抽樣誤差仍是不能避免。因此通常的做法，是評估非抽樣誤差的大小，供資料使用者在理解統計數字時作參考。其中一些評估的來源是預防非抽樣誤差措施（例如未能接觸住戶的處理）的副產品。其他如查點後的覆核統計調查，是特別為評估工作而進行的。後者所得的資料不會用作修訂人口普查結果。下面闡述四個評估研究：

from each other. Sampling error is measured by the “standard error”, which is an average measure of the squared deviations of all sample estimates from their average value, reflecting the precision of the estimates. The magnitude of the standard error of a variable depends on the sample size, the sampling method and the intrinsic variability of the characteristic concerned. For the 2021 Population Census, the sample design and the formula for estimating the standard errors are given in Chapter 5.

6.7 The precision of a sample estimate can also be reflected by its “confidence interval”. For example, the 95% confidence interval of a given sample estimate, with its upper and lower limits given respectively by about “two times the standard errors” above and below the sample estimate, would have a 95% probability of covering the population parameter. In other words, if similar confidence intervals were constructed for each of the 100 different samples of the same size selected using the same sampling method, one would expect that 95 of them would cover the population parameter.

6.8 Tables 6.1 and 6.2 show the sample estimates, the estimated standard errors and the 95% confidence intervals of some selected variables. They illustrate the range of precision of a spectrum of variables at various degrees of details for the 2021 Population Census.

Non-sampling errors

6.9 Despite the introduction of various precautionary measures, non-sampling errors were inevitable. It is therefore a usual practice to assess the magnitude of non-sampling errors so that data users can take them into account in interpreting the statistics. Some of these assessments are the by-products of precautionary measures such as the treatment of non-contact households. Others such as the Post Enumeration Survey are specifically done for the assessment purpose. In the latter case, no rectification would be made on the Census results. Four assessment studies are presented below:

未能接觸的住戶

6.10 為確保點算沒有遺漏，本處在人口普查期間執行了一些控制措施。這些措施包括統計員的工作分配表，均附詳細位置圖以方便外勤訪問；隨機抽選部分報稱無人居住的屋宇單位由覆核員再次進行外勤驗證，以確定所報稱的情況；隨機抽選已完成問卷的住戶，由覆核員再次造訪或致電住戶，以覆核問卷上的重要資料。

6.11 雖然統計員均被指示，在尚未完成某一住戶的訪問工作時，應於不同時間及不同日期最少探訪住戶四次，但仍會在人口普查期間未能接觸一些住戶。有關點算結果及有關未能接觸住戶的設算方法的詳情，請分別參閱第 4 章及第 5 章。

資料輸入誤差

6.12 2021 年人口普查應用「智能字元識別」及「光學標記識別」方法將紙本問卷上的資料，直接輸入電腦。第 4 章詳細描述數據輸入的程序。在這程序中，可能產生兩種誤差。其一是填寫的誤差，其二是辨認的誤差。

6.13 填寫誤差的情況，主要是在紙本問卷上沒有填妥智能字元識別或光學標記識別的方格、或在智能字元識別的數據項目方格上填寫錯誤的數值、或在同一光學標記識別的數據項目填上多於一個方格。本處從紙本問卷中抽取了一個約 1% 的獨立樣本，查驗智能字元識別及光學標記識別方格上的填寫有否漏填、錯誤地填寫或填上多於一個答案，以評估有關的誤差，結果列於表 6.3。

6.14 辨認的誤差是指智能字元識別或光學標記識別技術將有關方格的數值錯誤辨認了。為了減低這種誤差，在數

Non-contact households

6.10 Control measures were implemented to ensure the completeness of enumeration. These measures included attaching detailed location maps to assignment lists for enumerators to facilitate field visits, random selection of quarters reported to be vacant for verification by checkers through field visits, and random selection of completed questionnaires for checkers to verify the key information with the households through telephone or revisits.

6.11 Although the enumerators were instructed to make at least four visits to locate households for enumeration at different times of a day and on different days, some households still could not be contacted during the Census period. For more details on the enumeration results and the imputation method relevant to non-contact households, please refer to Chapters 4 and 5 respectively.

Data Capturing errors

6.12 “Intelligent Character Recognition (ICR)” and “Optical Mark Recognition (OMR)” techniques were adopted in the 2021 Population Census to capture data directly from the paper questionnaires. Details on the data capturing process are described in Chapter 4. Two types of errors, viz. the marking error and the recognition error, could incur in this process.

6.13 Marking error occurred when the ICR or the OMR boxes on the paper questionnaires were not correctly marked, or a wrong value was marked on an ICR data field, or more than one box was marked for a particular OMR data field. To assess the marking error, an about 1% independent sample was randomly selected to check whether the markings on the ICR and OMR boxes were missing, wrongly marked or double marked. The result is shown in Table 6.3.

6.14 Recognition error refers to the incident of value of the ICR or OMR box misread by the ICR or OMR technology. To minimise this error, strict

據輸入的過程中進行了嚴密的質素控制。為了令所有智能字元識別的數據項目的準確率能達到 98%，在數據輸入過程中，操作人員需要核對所有智能字元識別的數據項目和更正那些錯誤的數據。最後，在所有數據項目中抽取一個 2% 的樣本作質素查驗。有關結果顯示辨認的誤差極小。（表 6.3）

編碼錯誤

6.15 2021 年人口普查將大部分有關五個需要編碼的數據項目（行業、職業、上課地點、工作地點及 5 年前居住地方）的編碼工作在數據搜集階段中進行。透過編碼搜尋功能，問卷填報者在回答相關問題時可選擇在問卷上以搜尋資料庫方式選出最適當的答案，而電腦系統亦即時為選出的答案編碼。這令編碼工作更快捷及準確，因而有助提升編碼工作的效率。然而，由於問卷填報者可能會選取錯誤答案，錯誤編碼的機會仍然存在。因此，在數據處理階段中，電腦系統會按照一套完整的查驗及編校程序審核問卷上經已編碼的數據，以確保數據的合理性和一致性。

6.16 另一方面，在數據處理階段，編校員會為在數據搜集階段尚未編碼的數據項目進行電腦輔助編碼。在電腦輔助編碼過程中，已編碼的數據會經過質素查驗程序，以減少誤差。電腦系統會自動從每一個編校員完成的工作中，抽取一個 1% 的隨機樣本，由上級人員查驗編碼的準確性。質素查驗的結果顯示已編碼的數據質素良好。表 6.4 列出於質素查驗程序偵測到為數據項目進行電腦輔助編碼的誤差率。此外，電腦系統亦隨後按照一套完整的查驗及編校程序審核這些已編碼的數據，以確保數據的合

quality control was instituted during the data capturing process. To ensure the accuracy rate for ICR data fields meeting the standard of 98%, operators were required to verify all ICR data fields and amend those wrong data during the data capturing stage. Finally, a 2% sample of all data fields was randomly selected for quality checking. Results of quality check showed that the recognition error was extremely small. (Table 6.3)

Coding errors

6.15 In the 2021 Population Census, for the five data items that required coding (industry, occupation, place of study, place of work and place of residence 5 years ago), most of the coding work concerned was conducted at the data collection stage. Through a code-searching function, the person who filled in the questionnaire could choose to provide his/ her answers to the questions concerned by searching for and selecting the most suitable answers from the databases. The computer system would then instantaneously code the selected answers. This helped increase the efficiency of coding work by making it faster and more accurate. Nevertheless, as persons who filled in the questionnaires might select wrong answers, there was still a chance of obtaining wrong codes. Therefore, at the data processing stage, a complete validation and editing process was conducted to validate the coded data on the questionnaires so as to ensure data validity and consistency.

6.16 On the other hand, during the data processing stage, editors would perform computer-assisted coding for data items that had not been coded during the data collection stage. To reduce coding errors, a quality check on the coded data was conducted in the process of computer-assisted coding. A 1% random sample of the work performed by each editor was selected automatically by the computer system for verification by supervisors. The results of the quality check indicated that the coded data were of good quality. Table 6.4 shows the error rates of computer-assisted coding data items detected in the quality check. Furthermore, these coded data were then validated

記錄錯誤

6.17 任何的記錄或編碼錯誤，如經所有質素控制措施後仍未被發現，大部分應會在電腦編校程序中被辨別出來。這程序包括兩個階段，即是資料查驗及資料設算。資料查驗的目的，是確保（甲）資料記錄完整；（乙）所有編碼值均在可接受的範圍內；及（丙）一些記錄基本特徵的資料（例如一個人的年齡）與其他特徵（例如教育程度和經濟活動身分）沒有矛盾。每當發現錯誤，電腦系統會拒絕接受於相關資料項目所輸入的資料。編校員會在電腦終端機上檢視被拒項目與其他問卷上的資料，如有需要會改正被拒項目。表 6.5 列出與後兩種覆核有關的錯誤大小。

6.18 統計設算程序是全自動的。經資料查驗過程分辨出每一個記錄中資料項目之間所存在的矛盾後，統計設算程序便按預設的審核準則及設算機制，將有關資料項目中的矛盾數值除去，並配上系統估算值。每項記錄的漏報資料亦由同一統計設算模型同時配上系統估算值。設算率提供一個量度人口普查結果質素的方法。表 6.6 中列出部分選定數據項目的設算率。

6.19 為提升統計設算的質素和效率，本處參考不同統計先進經濟體採用的設算方法及技術，大幅優化 2021 年人口普查的統計設算模型。當中，本處採納了 CANCEIS 作為 2021 年人口普查

through a complete validation and editing process to ensure data validity and consistency.

Recording errors

6.17 Any recording or coding error left undetected after passing through all the quality control measures would, to a certain extent, be identified in the computerised editing process. The process consisted of two phases, viz. data validation and data imputation. Data validation aimed at ensuring that (a) the data record was intact; (b) all code values were within the acceptable ranges; and (c) information recorded for some basic characteristics such as the age of a person was consistent with other characteristics such as the educational attainment and economic activity status. Whenever an error was detected, information entered for the relevant data items would be rejected by the computer system. An editor then reviewed the rejected items on a computer terminal by checking against other information recorded on the questionnaire, and amended the rejected items if necessary. Table 6.5 shows the magnitude of the errors associated with the latter two types of validation checks.

6.18 The statistical imputation process was completely automatic. After identifying all the inconsistencies among data items of a record in the data validation process, the statistical imputation process removed the inconsistent values and assigned imputed values to the data items concerned according to prescribed validation rules and imputation mechanism. Imputed values were also assigned to non-responded data items of each record simultaneously by the same statistical imputation model. The imputation rate provides a measure of the quality of the Census results. Table 6.6 shows the imputation rates for some selected data items.

6.19 To increase the quality and efficiency of statistical imputation, the statistical imputation model of the 2021 Population Census was largely enhanced with reference to the imputation methodology and technology currently adopted by various statistically

統計設算模型的骨幹。CANCEIS 是一個由加拿大統計局創建並受國際認可的統計設算工具。它透過記錄配對機制，為錯漏資料配上最適當的系統估算值。基於統計設算模型的改變，2021 年人口普查的設算率不能跟過往人口普查／中期人口統計的設算率作直接比較。

查點後的覆核統計調查

6.20 進行查點後的覆核統計調查的目的在於評估 2021 年人口普查結果的準確性。本處在 2021 年人口普查涵蓋的屋宇單位中，隨機抽出約 0.3%（即約 10 000 個屋宇單位），由常任外勤職員於 2021 年 9 月 3 日至 10 月 31 日再次造訪獲選的屋宇單位。與人口普查的問卷比較，查點後的覆核統計調查的問卷只包括有關被選中屋宇單位內的住戶及人口數目的問題，而問題使用的字眼是完全相同。查點後的覆核統計調查是一項獨立工作，進行時並無參考在 2021 年人口普查中原初填妥的問卷上的資料。進行查點後的覆核統計調查後，本處將其結果與人口普查中所搜集得的相關資料相比，以評估 2021 年人口普查點算結果的準確性。查點後的覆核統計調查顯示在 2021 年人口普查中，多計或少計住戶及人口的程度都是非常輕微。

分類問題

6.21 編製社會及經濟統計數字前，必須將各單元分成不同組別，而針對某

advanced economies. Particularly, the “CANadian Census Edit and Imputation System” (CANCEIS) was incorporated as the backbone of the statistical imputation model for the 2021 Population Census. CANCEIS is an internationally recognised statistical imputation tool developed by Statistics Canada. It assigns the most feasible imputed values to missing/non-responded data according to its record matching mechanism. Because of a change in the statistical imputation model, the imputation rates in the 2021 Population Census could not be directly compared with those in the past population censuses/by-censuses.

Post Enumeration Survey

6.20 The purpose of conducting a Post Enumeration Survey was to assess the accuracy of the 2021 Population Census results. In the Post Enumeration Survey, about 0.3% of the total number of quarters (i.e. some 10 000 units of quarters) covered in the 2021 Population Census were randomly selected and re-visited by permanent field staff of this department during 3 September to 31 October 2021. When compared with the Census questionnaires, the Post Enumeration Survey questionnaire included only questions related to the counts of households and persons of the sampled quarters and the wordings of the questions used were identical. The Post Enumeration Survey was an independent exercise in which no reference was made to the questionnaires originally completed for the 2021 Population Census. After the conduct of the Post Enumeration Survey, the results obtained were matched with the relevant information obtained in the Census to assess the accuracy of the enumerated results of the 2021 Population Census. The Post Enumeration Survey revealed that the extent of over-counting or under-counting of households and population was very small in the 2021 Population Census.

Classification problems

6.21 In producing social and economic statistics, it is necessary to classify elements into different

些特定的特徵，各組別包含的單元應盡量性質相同。在分類過程中，可能會遇到問題及出現誤差。通常很難將這些分類誤差的幅度量化，除非存在相關參數的獨立估值。下面所講述的，是關於將受訪者的經濟活動身分及教育程度作分類的問題。

(a) 失業

6.22 2021年人口普查中用來識別失業人士的問題，主要目的是點算勞動人口的總數，亦即是從事經濟活動人口（由就業人口及失業人口組成的數目）。詳情請參閱《2021年人口普查主要結果》第6章。在就業人口及從事經濟活動人口方面，有關這些人口的分析可能還算滿意，但在失業人口方面卻不然。

根據定義，

人口 = 從事經濟活動人口(A) +
非從事經濟活動人口(B)，及

從事經濟活動人口(A) =
就業人口(X) + 失業人口(Y)

6.23 A、B及X的數值頗大，較少受誤差影響，可以用作分析。不過Y的估值較小，而其相聯的統計調查誤差可以頗大，所以不適宜用作分析。為反映失業情況而特地設計的「綜合住戶統計調查」，應該是提供失業人口估計的可靠數據來源。

groups, each of which comprising elements as homogeneous as possible with respect to some specified characteristics. In the process of classifying objects, problems may be encountered and errors may be introduced. In general, it is difficult to quantify the magnitude of such classification errors unless independent estimates of relevant parameters are available. Some problems related to the classification of persons with respect to their economic activity status and educational attainment are briefly described below.

(a) Unemployment

6.22 Inclusion of the questions for identifying unemployed persons in the 2021 Population Census mainly serves to complete the enumeration of the entire labour force, i.e. the economically active population (which is composed of the working population and the unemployed population). Please see Chapter 6 of the *2021 Population Census Main Results* for further details. While the analysis in respect of the working population and the economically active population is acceptable, it is considered not so for the unemployed population.

By definition,

Population =
Economically Active Population (A) +
Economically Inactive Population (B), and

Economically Active Population (A) =
Working Population (X) +
Unemployed Population (Y)

6.23 The magnitude of A, B and X are quite large and they are less affected by errors, so they are fine for analysis. However, the estimate for Y is relatively small and its associated survey errors can be relatively large, thus rendering it not suitable for analysis. The General Household Survey, which is devised specifically to reflect the unemployment situation, should be the reliable data source for obtaining estimates of the unemployed population.

(b) 教育程度

6.24 2021 年人口普查所採用的教育程度（最高就讀程度）及修讀科目分類方法雖然大致跟 2016 年中期人口統計所採用的分類方法相同，但數據使用者須留意 2021 年人口普查在搜集有關專上教育程度的詳細資料時所面對的必然限制，因為其中所包括的課程，在名稱、內容、分類及次分類方面均較複雜。首先，要獲取足夠的資料以辨別相近但在不同次分類的教育程度是有困難的。其次，就某些並不在香港接受教育的居民，他們的教育程度未必能完全套入本港現時的教育程度分類。甚至對一些在香港接受教育的居民，某個特定教育程度的名稱、實際收生程度及所包括的課程亦有可能隨著時間改變。因此數據使用者在比較不同時期的教育程度統計資料時，尤其是有關專上教育，應考慮這些因素。

(b) Educational attainment

6.24 Although the classifications of educational attainment (highest level attended) and field of education in the 2021 Population Census largely follow those adopted in the 2016 Population By-census, data users are reminded of the inherent limitations of the 2021 Population Census in obtaining detailed information on educational attainment at the post-secondary level because of the complexity in terms of course name, content, groupings and sub-groupings of the courses covered. First, it might be quite difficult to obtain enough information to distinguish between similar levels of educational attainment but falling into different sub-groupings. Second, some residents did not receive education in Hong Kong and their levels of educational attainment cannot perfectly fit into the present classification of levels of educational attainment adopted in Hong Kong. Even for those who received education in Hong Kong, the name, actual admission levels and courses covered of a specific level of educational attainment might have changed over time. Data users should therefore take all these factors into account when comparing statistics on educational attainment over time, in particular those relevant to post-secondary level.

(2) 有關「屋宇單位類型」、「住戶類型」、「性別」及「年齡」的數據項目並無進行設算。因此，這些不包括在計算整體設算率。

Notes : (1) Since most data items are present in the long form only, all imputation rates in this table (including those of data items present in both long and short forms) are calculated using long form results only.

(2) No imputation was carried out on the data items of “type of quarters”, “type of household”, “sex”, and “age”. They are thus excluded in calculating the overall imputation rates.

屋宇單位是否分間樓宇單位

定義：

分間樓宇單位是指個別屋宇單位被分間成兩個或以上「屋內互通」及「屋外直達」的單位。原有單位內的非結構分隔牆可能會被拆除，以新的分隔牆建成分間樓宇單位。這些分間樓宇單位也可能會加裝或改建渠管以配置獨立的廁所及／或廚房。

涵蓋範圍：

全港屋宇單位

問卷上問題號數：

長問卷 Q8

短問卷 B2

答案分類：

1 是

2 否

屋宇單位是否通常或偶然有人居住

定義：

即指屋宇單位在人口普查時是通常有人居住、偶然有人居住或無人居住。有人居住的單位是根據有關的人口統計範圍（即以「居住人口」方法點算的居港人口）予以決定。至於確定為無人居住的

Whether the quarters is a subdivided unit

Definition:

Subdivided units (SDUs) are formed by splitting a unit of quarters into two or more “internally connected” and “externally accessible” units. The non-structural partition walls in the original units may be removed while new ones are erected to form SDUs. Also, internal drains may be added or altered for installing toilets and/or kitchens in each SDU.

Coverage:

All quarters in Hong Kong

Question number on questionnaire:

Q8 in Long Form

B2 in Short Form

Response classification:

1 Yes

2 No

屋宇單位，則會按其原定的住用類型（如住宅或非住宅）作進一步區分。

涵蓋範圍：

全港屋宇單位

問卷上問題號數：

長問卷 Q4

短問卷 A1

答案分類：

- 1 通常有人居住
- 2 偶然有人居住
- 3 可作住宅用途而目前無人居住
- 4 只作非住宅用途（商業、工業或其他非住宅大廈的無人居住單位；住宅樓宇中作為工業或商業用途或其他非住宅用途的無人居住單位）

注意事項：

1. 在答案分類中，「有人居住」一項被細分為「通常有人居住」及「偶然有人居住」兩類，以便更清楚反映屋宇單位的用途，例如作為第二居所及度假屋。
2. 統計員可能難於分辨單位是「可作住宅用途而目前無人居住」還是「偶然有人居住」，這點是可以理解的。為使統計員能準確地報道單位是否通常或偶然有人居住，已特別加強在這方面的培訓。

住戶資料

7.3 一如以往的人口普查／中期人口統計，2021年人口普查亦以「住戶」為基本訪問單元。各個獲抽選受訪的屋宇單位內所有住戶內的人士均被點算。

enumerated under the “resident population” approach). In case of unoccupied quarters, it will be further distinguished according to the type of occupancy for which they are intended, i.e. residential or non-residential.

Coverage:

All quarters in Hong Kong

Question number on questionnaire:

Q4 in Long Form

A1 in Short Form

Response classification:

- 1 Usually with persons living
- 2 Occasionally with persons living
- 3 Can be used as residence but currently unoccupied
- 4 Non-residential use only (unoccupied quarters in commercial, industrial or other non-residential buildings; or unoccupied quarters in residential buildings which are used for industrial, commercial or other non-residential purpose)

Points-to-note:

1. The response category “occupied” is broken down into “usually with persons living” and “occasionally with persons living” to better reflect the usage of quarters for purposes like second residence and holiday homes.
2. It is understood that the enumerators may have difficulties to identify whether the unit of quarters “can be used as residence but currently unoccupied” or “occasionally with persons living”. Training was strengthened to reinforce the enumerators to accurately report on whether the unit of quarters is for usual or occasional residence.

Household data

7.3 The basic unit of enquiry in the 2021 Population Census, as in the previous population censuses/by-censuses, was a “household”. All persons in all households in each unit of quarters

在同一屋宇單位內居住及共同享用生活必需品的人士，均被視為同一住戶的成員。因此，一位與另一家庭分享其屋宇單位但自備膳食和自具其住戶開支賬項的人士，會被視為單人住戶。在這情況下，該家庭代表另一住戶，而這個屋宇單位的「共住程度」則為 2（即兩個住戶的屋宇單位）。

7.4 須注意的是，「家庭」和「住戶」為兩個不同的社會單元。「家庭」一般透過婚姻、親屬或領養等關係組成。很多時，「家庭」會等同「住戶」，但兩者亦可能會有分別，因為住戶成員之間不須有任何關係。「住戶」概念對規劃工作有重要影響，因為無論房屋、消費品及服務等各方面的需求，通常都是以「住戶」作為單元的。

7.5 2021 年人口普查共有 13 個關於住戶的數據項目。

住戶類型

定義：

住戶可劃分為「家庭住戶」和「集體住戶」兩類。前者包含居於同一屋宇單位並共同分享膳食和開支的人士，無論他們是否有關係。後者則主要由居於院舍的人士所組成，這些院舍包括安老院、療養院、中途宿舍、機構的職員宿舍及學校宿舍等。

涵蓋範圍：

所有住戶

問卷上問題號數：

長問卷 Q5

短問卷不適用

sampled for enquiry were enumerated. Persons who live and make common provisions for essentials for living inside a unit of quarters are regarded as members of the same household. Thus, a person who shares his/her unit of quarters with another family but cooks his/her own meals and keeps his/her own account of household expenses is regarded as a one-person household. In this case, the family represents a separate household and the unit of quarters is said to have a “degree of sharing” of 2 (households per unit of quarters).

7.4 It must be noted that “family” and “household” are different social units. People forming a “family” related either by marriage, kinship or adoption. Most often a “family” coincides with a “household” but the two may, in effect, differ because members of the same household need not be related. The “household” concept has important implications for planning purposes, as the unit of demand for housing and for consumption of goods and services is often a “household”.

7.5 There were 13 household related data topics in the 2021 Population Census.

Type of household

Definition:

Households can be distinguished into “domestic” and “collective” households. Domestic households consist of people living in the same unit of quarters, whether related or not, and sharing food and expenses. Collective households mainly consist of people living in institutions such as homes for the aged, infirmaries, half-way houses, staff quarters of establishments and school dormitories.

Coverage:

All households

Question number on questionnaire:

Q5 in Long Form

Not applicable in Short Form

答案分類：

- 1 家庭住戶
- 2 集體住戶

注意事項：

1. 由於集體住戶的性質特殊，所以在分析住戶特徵時，一般只會以家庭住戶作為對象。

住戶人數

主要用途：

用以研究家庭住戶組成的趨勢。

定義：

指家庭住戶中的居港人口數目。

涵蓋範圍：

所有家庭住戶

問卷上問題號數：

由長問卷 P8、P14 - P17 及短問卷 C5、C10、C11 等資料引申得出。

答案分類：

1 人、2 人、3 人、4 人、5 人、6 人……
97 人、98 人及以上

注意事項：

1. 雖然集體住戶的人數亦有計算，但這些資料沒有太大的分析價值。

住戶結構

定義：

「**住戶結構**」是根據住戶內各人與戶主的關係，以及他們之間的配偶、父母、子女關係的資料而得出的。各類「**住戶結構**」如下：

Response classification:

- 1 Domestic
- 2 Collective

Points-to-note:

1. In view of the nature of collective households, analysis on household characteristics usually confines to domestic households only.

Household size

Major use:

For studying the trend of domestic household formation.

Definition:

Household size refers to the number of persons who belong to the Hong Kong Resident Population living in the domestic household.

Coverage:

All domestic households

Question number on questionnaire:

Derived from information on P8, P14 - P17 in Long Form and C5, C10, C11 in Short Form

Response classification:

1, 2, 3, 4, 5, 6 …… 97, 98 and over

Points-to-note:

1. **Household size** is also calculated for collective households. However, it is not meaningful to analyse these data.

Household composition

Definition:

are as follows:

種族

定義：

一個人的種族由其本人來決定。有關「種族」的分類是參考不同的概念包括人種、膚色、世系、文化起源、國籍及語言等而制定。這分類方法與聯合國於2008年頒布的建議一致，亦參考了其他國家的做法，以及本地的情況。在香港人口中，大部分為華人，而非華人中則以亞洲人為主。因此，種族分類提供了較多與亞洲地區相關的類別。

Ethnicity

Definition:

The **ethnicity** of a person is determined by self-identification. The classification of “**ethnicity**” is determined with reference to a combination of concepts such as ethnic origin, colour, descent, cultural origins, nationality and language. This practice is in line with the recommendations promulgated by the United Nations in 2008, and has taken into account the practices of other countries as well as local circumstances. In Hong Kong, a significant proportion of the population is Chinese, and among the non-Chinese, Asians account for the majority. Therefore, there are more Asian related ethnic groups

經濟特徵

7.10 人口的「經濟特徵」主要包括市民的經濟活動身分、行業、職業及收入。這些資料，特別是失業統計數字，其實可從持續進行的「綜合住戶統計調查」中得到，但該調查所收集的就業人口資料未及全面，所以必須透過人口普查／中期人口統計來收集這些經濟數據。

7.11 2021年人口普查共有9個經濟數據項目。

經濟活動身分

定義：

人口可劃分為「從事經濟活動人口」（即勞動人口）及「非從事經濟活動人口」兩大類。

從事經濟活動人口 - 包括就業人士（即工作人口）及失業人口。

工作人口指符合以下條件的15歲及以上人士：（甲）在人口普查前的7天內有從事工作以賺取薪酬或利潤；或（乙）在人口普查前7天內有一份正式工作。工作人口可按

Points-to-note:

1. Only full-time students studying in Hong Kong were required to provide information on their “mode of transport to place of study”.
2. Data were collected under an usual approach and all modes of transport to place of study (up to a maximum of three) were recorded. If a person used more than three types of transport to go to school, three of them with the longest distance travelled were recorded.

Economic characteristics

7.10 “Economic characteristics” of the population mainly involve the people’s economic activity status, industry, occupation and income. Such information, particularly unemployment statistics, is indeed available from the continuous General Household Survey. It is essential to collect economic data in population censuses/by-censuses because the General Household Survey does not collect such comprehensive information on the employed persons.

7.11 There were 9 economic data topics in the 2021 Population Census.

Economic activity status

Definition:

The population can be divided into two main groups, “economically active population” (i.e. the labour force) and “economically inactive population” as follows:

Economically active population – This comprises the employed (i.e. the working population) and the unemployed.

The working population refers to persons aged 15 and over who should (a) be engaged in performing work for pay or profit during the 7 days before the Census; or (b) have formal job attachment during the 7 days before the Census. The working

就業身分劃分為：

僱員 - 為賺取工資、薪金、佣金、小費或實物津貼而為僱主（私人公司或政府）工作，包括家庭傭工、外發工和支薪家庭從業員。

僱主 - 從事本身業務／職業時為賺取利潤或費用而工作，最少僱用一人為其工作的人。

自營作業者 - 從事本身業務／職業時為賺取利潤或費用而工作，並沒有僱用他人或受僱於人的人。

無酬家庭從業員 - 為有關家庭生意工作但無收取報酬的人，亦算作就業人士。報酬不包括膳宿和零用錢。

失業人口：基本上指 15 歲及以上人士（甲）在人口普查前的 7 天內並無職位，且並無為賺取薪酬或利潤而工作；（乙）在人口普查前的 7 天內隨時可工作；及（丙）在人口普查前的 30 天內有找尋工作。

非從事經濟活動人口 - 指在人口普查前的 7 天內並無職位亦無工作的人，但不包括在該 7 天內正在休假和失業的人。而料理家務者、退休人士及所有 15 歲以下人士則包括在內。

料理家務者 - 照顧家庭而無收取報酬的人。

population can be distinguished by the employment status as follows:

Employee – A person who works for an employer (private companies or government) for wage, salary, commission, tips or payment in kind. Domestic helpers, outworkers and paid family workers are also included here.

Employer – A person who works for profit or fees in his/her own business/profession and employs one or more persons to work for him/her.

Self-employed – A person who works for profit or fees in his/her own business/profession, neither employed by someone nor employing others.

Unpaid family worker – A person who works for no pay in a family business is also considered as employed. Food and lodging and pocket money are not counted as pay.

Unemployed population refers basically to persons aged 15 and over who should (a) not have had a job and should not have performed any work for pay or profit during the 7 days before the Census; (b) have been available for work during the 7 days before the Census; and (c) have sought work during the 30 days before the Census.

Economically inactive population – This comprises persons who have not had a job and have not been at work during the 7 days before the Census, excluding persons who have been on leave/holiday during the 7-day period and persons who are unemployed. Persons such as home-makers, retired persons and all those aged below 15 are thus included.

Home-maker – A person who looks after the home without pay.

學生 - 在院校就讀全日制課程的人（對於 2021 年人口普查而言，學生是指在 2021 年上半年就讀全日制課程的人，並將會於人口普查（即 2021 年 6 月）之後的學年繼續修讀全日制課程）。自修、在各類訓練學校修讀非正式課程或夜間課程，並在人口普查進行前的 7 天內沒有工作的人亦歸入此類別。兼職學生歸入從事經濟活動人士，故並不包括在此類別內。

Student – A person who is studying full-time courses in an educational institution (as for the 2021 Population Census, students refers to those who had been studying in the first half of 2021 and would continue to study full-time in the academic year after the Census i.e. June 2021). Persons who are self-studying, or studying informal courses in miscellaneous training institutes or studying evening courses and were not working during the 7 days before the Census are also included in this category. Student workers are classified as economically active persons and are not included in this group.

退休人士 - 以前有工作，但現因年老而沒有繼續工作的人。

Retired person – A person who has worked previously but is not currently working because of old age.

經濟自給者 - 無須為生計而工作的人，他們的生活費通常依靠收租、儲蓄、投資收益或滙款等。

Of independent means – A person who does not have to work for a living. The cost of living is generally borne by rental receivable, savings, investment returns or remittances.

無酬照顧者 - 須無酬照顧親人或其他人士（包括長期病患、殘疾或年長／年幼的人士）的人。

Unpaid carer – A person who is engaged in unpaid care to family members or other persons (including persons with chronic diseases / disability and old/young persons).

其他非從事經濟活動人士 - 其他未有分類的非從事經濟活動人士，如非受薪的宗教工作者，以及因長期患病或殘疾而不能工作或沒有找尋工作的人。

Other economically inactive person – Economically inactive persons not elsewhere classified, e.g. unpaid religious workers and persons who cannot work or do not seek work because of permanent sickness or disablement.

所有 15 歲及以上的居港人口

Coverage:

Hong Kong Resident Population aged 15 and over

問卷上問題號數：

長問卷 P28 – P34a 及 P35 – P36

Question number on questionnaire:

P28 – P34a and P35 – P36 in Long Form

短問卷不適用

答案分類：

- 1 僱員
- 2 外發工
- 3 僱主
- 4 自營作業者（小販）
- 5 自營作業者（其他）

注意事項：

1. 根據國際勞工組織的建議，可以透過「有沒有工作」、「是否在找尋工作」、「是否可隨時上工」等問題，將人口劃分為三個類別（就業人士、失業人士、非勞動人口）。
2. 人口普查／中期人口統計中有關失業人士的問題之發問次序是根據國際勞工組織的建議而訂定。不過，這些問題的數量，較用以搜集失業數字的「綜合住戶統計調查」的為少，而且人口普查／中期人口統計聘用大量的臨時外勤工作人員進行點算工作，較難要求他們全面掌握勞動人口架構以及提問技巧，特別是有關找尋工作的問題，因此人口普查／中期人口統計所得的失業人士估計數字的準確度較低。數據使用者在研究失業問題時，應常以「綜合住戶統計調查」所得的數據為依據。人口普查／中期人口統計中用作界定失業人士的有關問題主要是用於點算從事經濟活動人口（即勞動人口），該數字由工作人口及失業人口組成，而勞動人口加上非從事經濟活動人口便成為整體人口。

Not applicable in Short Form

Response classification:

- 1 Employees
- 2 Outworkers
- 3 Employers
- 4 Self-employed (Hawkers)
- 5 Self-employed (Others)

Points-to-note:

1. According to the International Labour Organisation, the population can be classified into three categories (employed, unemployed, not in labour force) through questions on “any work”, “seeking work” and “available for work”.
2. The sequence of questioning to determine the unemployed in the population censuses/by-censuses follows that of the International Labour Organisation recommendations. Nevertheless, the number of questions included were less than that for the General Household Survey, which is designed for collecting unemployment statistics. Also, a large quantity of temporary field workers were employed to undertake the enumeration work in the population censuses/by-censuses, and they could not be expected to have a full understanding of the labour force framework and the required skills in asking screening questions, particularly those on the activity related to work seeking. Therefore, estimates of the unemployed based on population censuses/by-censuses are likely to have a lower degree of accuracy. Data users who wish to study the unemployment situation are advised always to refer to statistics obtained from the General Household Survey. Inclusion of the questions for identifying unemployed persons in the population censuses/by-censuses mainly serves to complete the enumeration of the entire economically active population (i.e. the labour force). This is because the economically active population is composed of the working population and the unemployed population; and when labour force is taken together with the economically inactive population, the whole population is formed.

009 不適用，包括：失業人士或非從事經濟活動人士

- 001 Occupation not classifiable, unidentifiable or inadequately described
009 Not applicable, including persons who are unemployed or economically inactive

注意事項：

- 職業分類主要以一個人在工作時所「執行的職責類型」為準則。「技能」是界定及說明這個概念的重要方法。因此，編碼方案亦可以說是一個以技能為基礎的分類法。技能的定義是個人執行一組職務的能力，或符合一份職業在技術上的要求的能力。「技能」可以分作兩個層面加以說明：

（甲） 技能的水平

技能水平關乎個人能夠順利完成本身負責的各項職務所需的知識的淵博程度，了解的深入程度、身手的敏捷程度及經驗的豐富程度。衡量的方法是視乎該人所接受的正規教

Points-to-note:

- The basic concept for the classifying occupation is mainly based on the “type of work performed” by an individual. An important means for defining and describing this concept is “skill”. Hence, the coding scheme can be regarded as a skill-based classification. Skill can be defined as the ability of an individual to perform a set of tasks or to fulfil the technical requirements of an occupation. It can be represented in two dimensions:

(a) Skill level

The skill level relates to the depth of knowledge and understanding and the degree of dexterity and experience required before an individual can satisfactorily perform the set of tasks involved. It can be measured as a function of the amount of formal

育、在職訓練及以前的經驗等。一般來說，涉及較複雜的職務的職業通常需要較高的技能水平。

(乙) 技能的專門性

一份職業的專門技能指執行職務所須具備特定的一門知識（即所執行職務有關的特定知識），以及所運用的工具或設備、所處理的材料及製成的產品或提供的服務。

- 問卷內有關職業的部分共有四條題目，即職位的名稱、執行的職務、職位所需的資歷及是否有直接管轄員工。其中執行的職務是為量度「技能的專門性」，而所需的資歷及管理和監督員工的程度是為量度「技能的水平」。
- 一份職業所需的技能指執行有關的職務時所需的技能，但不一定等於從事該項工作的人士所具備的技能。

每周通常工作時數

定義：

指一名就業人士在正常或典型的一個星期的通常工作時數，包括經常進行的超時工作（無論是有酬或無酬），但用膳時間、通常不用工作的日數或時數，及非經常進行的超時工作並不包括在內。在家中候命的時間不計算在工作時數中。居家就業人士在家中工作的時數則計算在內。

涵蓋範圍：

工作人口

education, on-the-job training and previous experience. In general, an occupation that involves more complex tasks will require a higher skill level.

(b) Skill specialisation

The skill specialisation of an occupation is a function of the field of knowledge required (i.e. the subject matter essential to the tasks performed) and the tools or equipment used, materials worked with and goods or services produced, in relation to the tasks performed.

- Information on occupation was collected using four questions in the questionnaire. They were related to job title, main tasks/duties performed, educational or professional qualification required by the job and whether any staff under direct supervision. Whilst the main tasks/duties performed is measuring the “skill specialisation”, the educational or professional qualification required by the job and the degree of management and supervision of staff are measuring the “skill level”.
- The skill requirements of an occupation are those needed for the performance of the tasks and are not necessarily the same as those possessed by the individual engaged in the work.

8. 地區分界系統

緒言

8.1 地區分界系統是編製和發放以地區為基礎的統計數字時不可缺少的。2021 年人口普查採用了兩套基本分界系統來發放人口普查結果。

小規劃統計區及單元區系統

8.2 「小規劃統計區及單元區系統」由規劃署制定，以作城市規劃用途。根據這個系統，全港陸地先按等級分為 9 個「總規劃統計區」，之下又分為 52 個「次規劃統計區」，之下又再分為 292 個「小規劃統計區」。各個「小規劃統計區」會劃分為若干個「單元區」。

8.3 各「小規劃統計區」／「單元區」的人口數目不盡相同。為顧及數據的精確度及保障個別受訪者的私隱，本處不能為一些人數少的「小規劃統計區」／「單元區」編製詳細統計數字。這些「小規劃統計區」／「單元區」將會與其相鄰的「小規劃統計區」／「單元區」組合成小規劃統計區組別或單元區組別，供發布統計資料之用。「小規劃統計區」／「單元區」均在 2021 年人口普查各有兩種不同程度的組合，詳情列於表 8.1。

8. Geographical Demarcation Systems

Introduction

8.1 Geographical demarcation systems are essential for the compilation and dissemination of statistical data on a geographical basis. Two basic demarcation systems are adopted for disseminating the 2021 Population Census results.

Tertiary Planning Unit & Subunit system

8.2 The “Tertiary Planning Unit & Subunit (TPU & SU) system” is devised and used by the Planning Department for town planning purpose. The whole land area of Hong Kong is divided hierarchically into 9 “Primary Planning Units (PPU)” at the first level, 52 “Secondary Planning Units (SPU)” at the second level and 292 “Tertiary Planning Units (TPU)” at the third level. Each “TPU” is sub-divided into a number of “Subunits (SU)”.

8.3 “TPUs”/“SUs” vary in size (in terms of the number of residents). Having regard to data precision and protection of data privacy of individual respondents, detailed statistical data are not shown for those “TPUs”/“SUs” with a small number of residents. In such cases, adjacent “TPUs” are grouped into TPU groups and “SUs” are grouped into SU groups for data dissemination. For both “TPUs” and “SUs”, there are two levels of aggregation in the 2021 Population Census. They are detailed in Table 8.1.

表 8.1 「小規劃統計區」／「單元區」組別的組合
Table 8.1 Aggregation of Tertiary Planning Unit and Subunit groups

	組合程度 Level of aggregation	組別數目 Number of groups
小規劃統計區 TPUs		
小規劃統計區 - 大合併組 Large TPU groups	有 10 000 名及以上居民的小規劃統計區 TPU groups with 10 000 residents and over	159
小規劃統計區 - 小合併組 Small TPU groups	有 1 000 名及以上居民的小規劃統計區 TPU groups with 1 000 residents and over	211
單元區 SUs		
單元區 - 大合併組 Large SU groups	有 1 000 名及以上居民的單元區 SU groups with 1 000 residents and over	1 746
單元區 - 小合併組 Small SU groups	有 400 名及以上居民的單元區 SU groups with 400 residents and over	2 342

8.4 「小規劃統計區 - 大合併組」的統計表有按較多數據項目分析或較詳細分類的統計數字，而「小規劃統計區 - 小合併組」、「單元區 - 大合併組」及「單元區 - 小合併組」的統計表，其數據項目則較少或分類較簡單。

8.4 While statistics are cross-tabulated by more data items or with more refined groupings in the “Large TPU groups”, cross-tabulations are in less detail and less refined groups for “Small TPU groups”, “Large SU groups” and “Small SU groups”.

區議會分區／選區系統

District Council District / Constituency Area system

8.5 「區議會分區／選區系統」是為方便分區行政及選舉之用。全港地及海域被分為 18 個區議會分區，然後再分為 452 個選區。2021 年人口普查採用按 2019 年 11 月 24 日區議會選舉時所用的區議會選區分界，而該分界是根據《2018 年選區（區議會）宣布令》（2018 年第 263 號法律公告），由行政長官會同行政會議根據《區議會條例》（第 547 章）第 6 條而作出的。另一方面，居於船艇上的居民則被統稱為「水上居民」，而不再按區議會分區及選區劃分。

8.5 The “District Council District / Constituency Area (DC/CA) system” is developed for district administration and election purposes. The whole land and sea areas of Hong Kong are divided into 18 District Council districts (DCs) which are further divided into 452 Constituency Areas (CAs). The set of CA boundaries adopted in the 2021 Population Census is based on those declared in the Declaration of Constituencies (District Councils) Order 2018 (L.N. 263 of 2018) made by the Chief Executive in Council under section 6 of the District Councils Ordinance (Cap. 547) for the District Council Election held on 24 November 2019. On the other hand, population living on board vessels are collectively known as the “Marine Population” without further breakdown into DC/CAs.

8.6 新界各個區議會分區亦可分為新市鎮及其他地區，新市鎮界線乃採自規劃署及土木工程拓展署訂定的新市鎮發展範圍。全港共有 10 個新市鎮，即是荃灣、屯門、元朗、天水圍、粉嶺／上水／古洞、大埔、沙田、將軍澳、東涌及洪水橋／廈村。新市鎮分界亦用作發布 2021 年人口普查結果。為定義內部遷移，荃灣新市鎮中的荃灣、葵涌和青衣地區，以及沙田新市鎮中的沙田和馬鞍山地區會作個別分析。

8.6 DCs in the New Territories can also be divided into new towns and other areas. The delineation of the areas in the New Territories into new towns is adopted from the boundaries developed by the Planning Department and the Civil Engineering and Development Department for new town development purposes. There are 10 new towns namely Tsuen Wan, Tuen Mun, Yuen Long, Tin Shui Wai, Fanling / Sheung Shui / Kwu Tung, Tai Po, Sha Tin, Tseung Kwan O, Tung Chung and Hung Shui Kiu / Ha Tsuen. New town boundaries are also adopted in the dissemination of the 2021 Population Census results. Tsuen Wan, Kwai Chung and Tsing Yi areas under Tsuen Wan New Town as well as Sha Tin and Ma On Shan areas under Sha Tin New Town are analysed separately for the purpose of defining internal migration.
